Following his well-received books in this 'In Detail' series on the Ferguson TE20 and the Massey Ferguson 35 & 65 models, author Michael Thorne turns his attention to the outstandingly successful and well-loved 100 Series of tractors. Of the 100 range, the most popular was and remains the 135. Half a million 135s were built at Massey Ferguson's factory in Coventry alone, with production overseas on top of this figure. Another big success was the larger, more powerful 165, with nearly 200,000 sold. This model, like the 135, is among the most popular and sought-after classic tractors today, although many 135s and 165s are still in active use around the world, in spite of their age. The 100 range included a great number of other models, and in addition to the 135 and 165, which are given in-depth treatment here, important models described in detail are the 130, 148 Super-Spec, 168, 175, 185 and 188 Super-Spec. There is an extensive chapter on the implements available for the range, and another on conversions. Featuring 290 illustrations including detailed specially-commissioned colour photography of outstanding examples of 100 Series tractors, [Massey Ferguson 100 Series In Detail](#) offers an unrivaled store of knowledge for the owners and enthusiasts who care passionately about these tractors, and serves as a tribute to the people who made them.

This manual is a comprehensive compilation of "methods that work" for deriving, characterizing, and differentiating hPSCs, written by the researchers who developed and tested the methods and use them every day in their laboratories. The manual is much more than a collection of recipes; it is intended to spark the interest of scientists in areas of stem cell biology that they may not have considered to be important to their work.

---

The second edition of the Human Stem Cell Manual is an extraordinary laboratory guide for both experienced stem cell researchers and those just beginning to use stem cells in their work. Offers a comprehensive guide for medical and biology researchers who want to use stem cells for basic research, disease modeling, drug development, and cell therapy applications. Provides a cohesive global view of the current state of stem cell research, with chapters written by pioneering stem cell researchers in Asia, Europe, and North America. Includes new chapters devoted to recently developed methods, such as iPSC technology, written by the scientists who made these breakthroughs.
