Although the general rule-just stated will apply in the great majority of cases where the patron has failed to report the entire face amount of an allocation in document form, there are situations in which an exception should be made. These are cases in which the period of limitations for the year of allocation has expired and before such expiration the Internal Revenue Service was on notice that the patron had included in his income an amount less than the face amount of his certificate or other evidence of allocation. As an example this notice might consist of information given in the patron's return from which the Service could have known that the patron received patronage dividends in document form and failed to include them in his gross income. In any such exceptional case the Service will not insist that there be included in income the amount in which the payment received in the year of redemption exceeds the amount reported in the year of allocation. However, in this type of case if the amount received upon redemption exceeds the face amount of the document, the excess would be included in income. The term "Office Automation" implies much and means little. The word "Office" is usually reserved for units in an organization that have a rather general function. They are supposed to support different activities, but it is notoriously difficult to determine what an office is supposed to do. Automation in this loose context may mean many different things. At one extreme, it is nothing more than giving people better tools than typewriters and telephones with which to do their work more efficiently and effectively. At the opposite extreme, it implies the replacement of people by machines which perform office procedures automatically. In this book we will take the approach that "Office Automation" is much more than just better tools, but falls significantly short of replacing every person in an office. It may reduce the need for clerks, it may take over some secretarial functions, and it may lessen the dependence of principals on support personnel. Office Automation will change the office environment. It will eliminate the more mundane and well understood functions and will highlight the decision-oriented activities in an office. The goal of this book is to provide some understanding of office activities and to evaluate the potential of Office Information Systems for office procedure automation. To achieve this goal, we need to explore concepts, elaborate on techniques, and outline tools.

Authors: Ann Allott Daniel M. Kowalski Edward F. "Ned" Frazier Since the 1980s, employers have been required to verify that new employees are entitled to work in the United States. Enforcement of the verification laws had been lax, however, until a trend in recent years that began to show large increases in "immigration raids" and other government enforcement activity to remove unauthorized noncitizens from U.S. workplaces. Verification enforcement exposes employers to serious criminal charges and heavy fines and penalties. At the same time, however, the statutes also impose liability on employers for discriminating on the basis of national origin or

citizenship status. As with documentation violations, discrimination charges similarly can lead to fines, penalties, large awards of damages, litigation expense, unfavorable publicity, and other harmful effects on a business. It can be very difficult to avoid liability for documentation violations while at the same time avoiding liability under the discrimination provisions. Immigration Enforcement: 1-9 Compliance Handbook offers guidance from Ann Allott, an attorney who has spent years practicing, writing, and speaking on just this problem. She offers easily understood, step-by-step procedures, sample forms and notices, and reference materials to point employers through this difficult area of immigration and employment law. Additional material is contributed by Daniel Kowalski, editor-in-chief of Bender's Immigration Bulletin, and by Edward F. Frazier, a long-time HR expert. Hearings on S. Res. 301

This book adopts a principled approach to the law applied in the construction of commercial contracts. This approach is presented as part of a coherent theory of the law of contract construction which makes a unique contribution to scholarship and understanding of the most important aspect of the practice of commercial lawyers. The law is explained by reference to three stages in construction. It distinguishes the preliminary stage in which context is established, from the 'meaning' and 'application' stages of contract construction. The approach provides insights both into the practical problems that lawyers face, in particular in relation to admissibility of extrinsic evidence, and the theoretical underpinnings of the subject. The book also explains the relationship between intention and construction, and discusses general and specific rules that determine the results of construction disputes. Each chapter is introduced by statements of its objectives and the book includes simple definitions of key concepts, as well as summaries of the complex principles which comprise the law of construction. In illustrating construction principles and their application, the exposition of the law draws on the author's knowledge of Australian contract law and the influence and role of the UNIDROIT principles, CISG and the American Restatement (Second) Contracts.
