All these texts teach factor analysis as if psychologists (or, perhaps, behavioral scientists) are the only prospective users. Factor analysis is a mathematical procedure for reducing a

correlation matrix to as small a number of uncorrelated “ factors ” as possible.

Factor Analysis. Generate a variance-covariance matrix of the observed variables. Select the number of factors. Extract your initial set of factors. Perform factor rotation to a

terminal solution. Interpret the factor structure. Construct factor scores to use in further analyses. The methodology relies on the (often unjustified) assumption that  $n$  factors exist.
