This book reviews the evaluation research literature that has accumulated around 19 K-12 mathematics curricula and breaks new ground in framing an ambitious and rigorous approach to curriculum evaluation that has relevance beyond mathematics. The committee that produced this book consisted of mathematicians, mathematics educators, and methodologists who began with the following charge: Evaluate the quality of the evaluations of the thirteen National Science Foundation (NSF)-supported and six commercially generated mathematics

curriculum materials; Determine whether the available data are sufficient for evaluating the efficacy of these materials, and if not; Develop recommendations about the design of a project that could result in the generation of more reliable and valid data for evaluating such materials. The committee collected, reviewed, and classified almost 700 studies, solicited expert testimony during two workshops, developed an evaluation framework, established dimensions/criteria for three methodologies (content analyses, comparative studies, and case studies), drew conclusions on the corpus of studies, and made recommendations for future research.

On Being a Mentor to Students in Science and Engineering Springer Nature

This book is to explore a variety of facets of online learning environments to understand how learning occurs and succeeds in digital contexts and what teaching strategies and technologies are most suited to this format. Business, health, government and education are some of the core sectors of society which have been experiencing deep transformations due to a generalized digitalization. While these changes are not novel, the swift progress of technology and the rising complexity of digital environments place a focus on the need for further research and novel strategies. In the context of education, the promise of increased flexibility and broader access to educational resources is impelling much of higher education 's course offerings to

online environments. The 21st century learner requires an education that can be pursued anytime and anywhere and that is more aligned with the demands of a digital society. Online education not only assists students to success-fully integrate a workforce that is increasingly digital, but it helps them to become more comfortable with the use of technology in general and, hence, more prepared to be prolific digital citizens. The variety of settings portrayed in this volume attest to the unlimited opportunities afforded by online learning and serve as valuable evidence of its benefit for students ' educational experience. Moreover, these research efforts assist a more comprehensive reflection about the delivery of higher education in the context of online settings.

Registries for Evaluating Patient Outcomes Government Printing

This User ' s Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files)

derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of

patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User ' s Guide was created by researchers affiliated with AHRQ ' s Effective Health Care Program, particularly those who participated in AHRQ ' s DEcIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews. The rise of neo-nationalism is having a profound and troubling impact on leading national universities and the societies they serve. This is the first comparative study of how today's right-wing populist movements and authoritarian governments are threatening higher education.

Universities have long been at the forefront of both national development and global integration. But the political and policy world in which they operate is undergoing a transition, one that is reflective of a significant change in domestic politics and international relations: a populist turn inward among a key group of nation-states, often led by demagogues, that includes China and Hong Kong, Turkey, Hungary, Russia, Brazil, the United Kingdom, and the United States. In many parts of the world, the COVID-19 pandemic provided an opportunity for populists and autocrats to further consolidate their power.

Within right-wing political ecosystems, universities, in effect, offer the proverbial canary in the coal mine – a clear window into the extent of civil liberties and the political environment and trajectory of nation-states. In *Neo-nationalism and Universities*, John Aubrey Douglass provides the first significant examination of the rise of neo-nationalism and its impact on the missions, activities, behaviors, and productivity of leading national universities. Douglass presents a major comparative exploration of the role of national politics and norms in shaping the role of universities in nation-states – and vice versa. He also explores when universities are societal leaders or followers: When they are agents of social and economic change, or simply agents reinforcing and supporting an existing social and political order. In a series of case studies, Douglass and contributors examine troubling trends that threaten the societal role of universities, including attacks on civil liberties, free speech, and the validity of science; the firing and jailing of academics; anti-immigrant rhetoric; and restrictions on visas with consequences for the mobility of academic talent. The book also offers recommendations to preserve

the autonomy and academic freedom of universities and their constituents. Neo-nationalism and Universities is written for a broad public readership interested and concerned about the rise of nationalist movements, illiberal democracies, and autocratic leaders.
