The theme of this book evolved from the idea of linking three concepts around food: traceability, ethics and informed choice. We believe that the current development and implementation of traceability in the agri-food sector offers an interesting way not only of handling food safety but also of addressing and communicating ethical issues arising from current food production practices. Practices in the agri-food sector worry food consumers (as we all are, since we need to eat and drink to stay alive). But how can consumers act upon their concerns? Paradoxically, although consumers are bombarded with information on food – from the media, the food industry, food authorities, NGOs and interest groups – details about how foods are actually produced is often hard to find. Much of the information available is superficial, conflicting or partial, and it is hard for consumers seeking to make informed food choices to know which information to trust. The consumers we interviewed for this project felt that information about food products was withheld and manipulated. Traceability, which provides a record of the history and journey of a given food, and which is increasingly used in the food sector for legal and commercial reasons, has the potential to communicate a more authentic picture of how food is produced.

Essentials of Monte Carlo Simulation focuses on the fundamentals of Monte Carlo methods using basic computer simulation techniques. The theories presented in this text deal with systems that are too complex to solve analytically. As a result, readers are given a system of interest and constructs using computer code, as well as algorithmic models to emulate how the system works internally. After the models are run several times, in a random sample way, the data for each output variable(s) of interest is analyzed by ordinary statistical methods. This book features 11 comprehensive chapters, and discusses such key topics as random number generators, multivariate random variates, and continuous random variates. Over 100 numerical examples are presented as part of the appendix to illustrate useful real world applications. The text also contains an easy to read presentation with minimal use of difficult mathematical concepts. Very little has been published in the area of computer Monte Carlo simulation methods, and this book will appeal to students and researchers in the fields of Mathematics and Statistics.

The founders and forerunners of the Southern Baptist Convention were fundamentally shaped by the thought of Puritan theologian Jonathan Edwards and his theological successors. While Baptists in the antebellum South boasted a different theological pedigree than Presbyterians or Congregationalists, and while they inhabited a Southern landscape unfamiliar to the bustling cities and tall forests of New England, they believed their similarities with Edwards far outweighed their differences. Like Edwards, these Baptists were revivalistic, Calvinistic, loosely confessional, and committed to practical divinity. In these four things, Southern Edwardseanism lived, moved, and had its being. In the nineteenth-century, when so many Presbyterians scoffed at Edwards's "innovation" and Methodists scorned his Calvinism, Baptists found in Edwards a man after their own heart. By 1845, at the first Southern Baptist Convention, Southern Edwardseans had laid the groundwork for a convention marked by the theology of Jonathan Edwards.

The relationship between ethics, politics, and poetics is here examined by Wrighton, in the study of twentieth-century experimental American poetry. Relying upon the ethical philosophy of Emmanuel Levinas, Wrighton charts the development of ethical praxis in experimental work from the Objectivists of the 1920s, through to detailed analysis of the Black Mountain and Beat writers of the post-war era, and the post-Vietnam Language poets. The poetic projects engaged -- including work from Charles Olson, Gary Snyder, Allen Ginsberg, Jerome Rothenberg, and Bruce Andrews -- are shown to be oppositional to the dominant political discourses of their time, re-imagining notions of democracy and community where an ontological abuse has been manifest in totalizing ideologies.
