The Lancet London Alisa Woods Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health

challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.

A live kidney weighing 150-200gms is the most sought-after organ worldwide, with people willing to buy from unrelated live donors for a few lakh rupees. There are almost 2000 kidney transplants happening in India yearly – less than half this number meet the country's legal requirements.

Former Prime Minister Atal Bihari Vajpayee and the Secretary General of Rajya Sabha, Sudarshan Agarwal are the two people who helped the enactment of an organ transplant law in India. India imports dialysis machines and its first made-in India machine has just gone on clinical trial though nephrological services began here some 50 years ago.

Harvesting of kidneys from unfortunate accident victims is the only solution to the shortage of kidneys for transplantation in India – with 150,000 accidents every year on the country's deadly roads. To make kidneys available readily and legally from accident victims and the brain dead, the law needs amendment and a National Organ Harvesting Programme (NOHP) is urgently needed. In this book, Dr Ramesh Kumar reveals the stark reality of kidney

scams in India and strongly advocates the need of a National Organ Harvesting Programme (NOHP).

When Erwin Leichter played the Tiger Rag in the sealed-off ghetto, his situation was not for a moment less serious, but he was buoyant with youth. *Pinball Games*, illustrated by the author, tells a story of survival, sometimes through luck, sometimes by daring action, of a group of Hungarian friends through the darkest days of World War II, and later, as they escape from Communist Hungary to the free world. After a youth marked by golden days on the Danube, the author and many of his classmates are drafted into "the white armbands" labor battalions of Christian Jews. They jump for their lives from a train bound for the death camps, and eventually make their way back to Budapest to live through the Siege of Budapest, one of the longest and least written about sieges of World War II. With peace come more golden days on the Danube, but they are illusions: Stalin's "Communist Agenda" forces more escapes. The author, his stepmother, and his father, whose business had been among the first private businesses seized in Budapest, successfully navigate land mines and wire fences to reach the West. "There might be difficult days ahead but I knew those years that called forth the greatest effort of my life were over," writes George F. Eber. "At the time of our escape, the term Iron Curtain was rather newly coined. To me it still meant the great metal fire-curtain in the Budapest theatres of my youth. Now the Iron Curtain had fallen behind us on the theatre of the macabre."

A Semiotic Analysis Macmillan

"One of America's most courageous young journalists" and the author of the #1 New York Times bestselling memoir *Brain on Fire* investigates the shocking mystery behind the dramatic experiment that revolutionized modern medicine (NPR). Doctors have struggled for centuries to define insanity--how do you diagnose it, how do you treat it, how do you even know what it is? In search of an answer, in the 1970s a Stanford psychologist named David Rosenhan and seven other people--sane, healthy, well-adjusted

members of society--went undercover into asylums around America to test the legitimacy of psychiatry's labels. Forced to remain inside until they'd "proven" themselves sane, all eight emerged with alarming diagnoses and even more troubling stories of their treatment. Rosenhan's watershed study broke open the field of psychiatry, closing down institutions and changing mental health diagnosis forever. But, as Cahalan's explosive new research shows in this real-life detective story, very little in this saga is exactly as it seems. What really happened behind those closed asylum doors?

"A timely, sophisticated tale [that] explores what happens when a charmed life loses its luster." --O Magazine From the award-winning author of the new collection *Awayland*, an imaginative novel about a wealthy New England family in the 1960s and '70s that suddenly loses its fortune--and its bearings. An NPR Best Book of the Year Labor Day, 1976, Martha's Vineyard. Summering at the family beach house along this moneyed coast of New England, Fern and Edgar--married with three children--are happily preparing for a family birthday celebration when they learn that the unimaginable has occurred: There is no more money. More specifically, there's no more money in the estate of Fern's recently deceased parents, which, as the sole source of Fern and Edgar's income, had allowed them to live this beautiful, comfortable life despite their professed anti-money ideals. Quickly, the once-charmed family unravels. In distress and confusion, Fern and Edgar are each tempted away on separate adventures: she on a road trip with a stranger, he on an ill-advised sailing voyage with another woman. The three children are left for days with no guardian whatsoever, in an improvised Neverland helmed by the tender, witty, and resourceful Cricket, age nine. Brimming with humanity and wisdom, humor and bite, and imbued with both the whimsical and the profound, *Sons and Daughters of Ease and Plenty* is a story of American wealth, class, family, and mobility, approached by award-winner Ramona Ausubel with a breadth of imagination and understanding that is fresh, surprising, and exciting.

Racial and ethnic disparities in health care are known to reflect access to care and other issues that arise from differing socioeconomic conditions. There is, however, increasing evidence that even after such differences are accounted for, race and ethnicity remain significant predictors of the quality of health care received. In *Unequal Treatment*, a panel of experts documents this evidence and explores how persons of color experience the health care environment. The book examines how disparities in treatment may arise in health care systems and looks at aspects of the clinical encounter that may contribute to such disparities. Patients' and providers' attitudes, expectations, and behavior are analyzed. How to intervene? *Unequal Treatment* offers recommendations for improvements in medical care financing, allocation of care, availability of language translation, community-based care, and other arenas. The committee highlights the potential of cross-cultural education to improve provider-patient communication and offers a detailed look at how to integrate cross-cultural learning within the health professions. The book concludes with recommendations for data collection and research initiatives. *Unequal Treatment* will be vitally important to health care policymakers, administrators, providers, educators, and students as well as advocates for people of color.
