A live kidney weighing 150-200gms is the most sought-after organ worldwide, with people willing to buy from unrelated live donors for a few lakh rupees. There are almost 2000 kidney transplants happening in India yearly – less than half this number meet the country ' s legal requirements. Former Prime Minister Atal Bihari Vajpayee and the Secretary General of Rajya Sabha, Sudarshan Agarwal are the two people who helped the enactment of an organ transplant law in India. India imports dialysis machines and its first made-in India machine has just gone on clinical trial though nephrological services began here some 50 years ago. Harvesting of kidneys from

unfortunate accident victims is the only solution to the shortage of kidneys for transplantation in India – with 150,000 accidents every year on the country ' s deadly roads. To make kidneys available readily and legally from accident victims and the brain dead, the law needs amendment and a National Organ Harvesting Programme (NOHP) is urgently needed. In this book, Dr Ramesh Kumar reveals the stark reality of kidney scams in India and strongly advocates the need of a National Organ Harvesting Programme (NOHP).

When Erwin Leichter played the Tiger Rag in the sealed-off ghetto, his situation was not for a moment less serious, but he was buoyant with youth. Pinball Games, illustrated by the author, tells a story of survival, sometimes through luck, sometimes by daring action, of a group of Hungarian friends through the darkest days of World War II, and later, as they escape from Communist Hungary to the free world. After a youth marked by golden days on the Danube, the author and many of his classmates are drafted into "the white

armbands" labor battalions of Christian Jews. They jump for their lives from a train bound for the death camps, and eventually make their way back to Budapest to live through the Siege of Budapest, one of the longest and least written about sieges of World War II. With peace come more golden days on the Danube, but they are illusions: Stalin's "Communist Agenda" forces more escapes. The author, his stepmother, and his father, whose business had been among the first private businesses seized in Budapest, successfully navigate land mines and wire fences to reach the West. "There might be difficult days ahead but I knew those years that called forth the greatest effort of my life were over," writes George F. Eber. "At the time of our escape, the term Iron Curtain was rather newly coined. To me it still meant the great metal fire-curtain in the Budapest theatres of my youth. Now the Iron Curtain had fallen behind us on the theatre of the macabre."

My Dragon Bodyguard (Broken Souls 4) Macmillan

'My first serious blackout marked the line between sanity and insanity. Though I would have moments of lucidity over the coming days and weeks, I would never again be the same person ...' Susannah Cahalan was a happy, clever, healthy twenty-four-year old. Then one day she woke up in hospital, with no memory of what had happened or how she had got there. Within weeks, she would be transformed into someone unrecognizable, descending into a state of acute psychosis, undergoing rages and convulsions, hallucinating that her father had murdered his wife; that she could control time with her mind. Everything she had taken for granted about her life, and who she was, was wiped out. Brain on Fire is Susannah's story of her terrifying descent into madness and the desperate hunt for a diagnosis, as, after dozens of tests and scans, baffled doctors concluded she should be confined in a psychiatric ward. It is also the story of how one brilliant man, Syria-born Dr Najjar, finally proved - using a simple pen and paper - that Susannah's psychotic behaviour was caused by a rare autoimmune disease attacking her brain. His diagnosis of this little-known condition, thought to have been the real cause of devil-possessions through history, saved her life, and possibly the lives of many others. Cahalan takes readers inside this newly-discovered disease through the progress of her own harrowing journey, piecing it together using memories, journals, hospital videos and records. Written with passionate honesty and intelligence, Brain on Fire is a searingly personal yet universal book, which asks what happens when your identity is suddenly destroyed, and how you get it back. 'With eagle-eye precision and brutal honesty, Susannah Cahalan turns her journalistic gaze on herself as she

bravely looks back on one of the most harrowing and unimaginable experiences one could ever face: the loss of mind, body and self. *Brain on Fire* is a mesmerizing story' -Mira Bartók, New York Times bestselling author of *The Memory Palace* Susannah Cahalan is a reporter on the New York Post, and the recipient of the 2010 Silurian Award of Excellence in Journalism for Feature Writing. Her writing has also appeared in the New York Times, and is frequently picked up by the Daily Mail, Gawker, Gothamist, AOL and Yahoo among other news aggregator sites.

In 1945, US Intelligence officers in Manila discovered that the Japanese had hidden large quantities of gold bullion and other looted treasure in the Philippines. President Truman decided to recover the gold but to keep its riches secret. These would be combined with treasure recovered inside Japan during the US occupation, and with Nazi loot recovered in Europe, to create a worldwide American political action fund to fight communism. Overseen by General MacArthur, President Truman, and John Foster Dulles, this "Black Gold" gave Washington virtually limitless, unaccountable funds, providing an asset base to reinforce the treasuries of America's allies, to bribe political and military leaders, and to manipulate elections in foreign countries for more than fifty years. Drawing on a vast range of original documents and thousands of hours of interviews, Gold

Warriors exposes one of the great state secrets of the twentieth century. Index-catalogue of the Library of the Surgeon-General's Office, United States Army Rizzoli & Isles

Don't Lie to Me Penguin

"One of America's most courageous young journalists" and the author of the #1 New York Times bestselling memoir *Brain on Fire* investigates the shocking mystery behind the dramatic experiment that revolutionized modern medicine (NPR). Doctors have struggled for centuries to define insanity--how do you diagnose it, how do you treat it, how do you even know what it is?

In search of an answer, in the 1970s a Stanford psychologist named David Rosenhan and seven other people--sane, healthy, well-adjusted members of society--went undercover into asylums around America to test the legitimacy of psychiatry's labels. Forced to remain inside until they'd "proven" themselves sane, all eight emerged with alarming diagnoses and even more troubling stories of their treatment. Rosenhan's watershed study broke open the field of psychiatry, closing down institutions and changing mental health diagnosis forever. But, as Cahalan's explosive new research shows in this real-life detective story, very little in this saga is exactly as it seems. What really happened behind those closed asylum doors?

Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the

National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.
