In June, 2015, Lewis Kent was just an ordinary twenty-one-year-old college kid who liked to run. By December, 2015, just six months later, he had appeared in ESPN, Buzzfeed, Ellen, and dozens of other major outlets. Videos of him running went viral, and he received daily calls from agents. So why all the attention? Simple: He ran the Beer Mile, and he ran it unbelievably fast. The beer mile is a track or road race in which you chug a beer, run a quarter mile, chug another beer, run another quarter mile, chug, run, chug, run: four beers, four laps, no vomiting allowed. "Chug, run, repeat." If it sounds difficult (but really fun), it's because it absolutely is. The event first went viral in 2014 when the five-minute barrier was broken. Kent became the world champion and broke the world record in late 2015 with a time of 4 minutes, 47 seconds, just over a minute longer than the world record for the regular mile. After that, he became the world's first professional Beer Miler, literally being paid for his superhuman ability to run fast and drink quickly. Part memoir, part how-to manual, *A World Champion's Guide to Running the Beer Miles* is for both serious athletes and recreational runners who love to run, enjoy a drink, and like the idea of a challenge.

The novel is the major literary phenomenon of the twentieth century, and its development in Britain since 1900 has reflected the tumultuous changes that have characterized modern society. Randall Stevenson now presents an accessible and authoritative guide to the work of the century's leading novelists as well as many of its lesser known writers. In this stimulating and wide-ranging account, Stevenson locates the work of individual writers, from Conrad to Jeanette Winterson, within an evolving literary history and the wider context of social, political, and cultural change. Included are British writers working in exile and writers with origins elsewhere, such as James and Rushdie, who have chosen to work in Britain. Women novelists are accorded their rightful prominence. This clear and lively survey deals with a broad range of movements, including modernism and postmodernism, as well as the influence of other world literatures and the impact of two world wars. An ideal text, this is a 'guide' in the best sense—concise and lucid, well-informed and perceptive. Readers new to the field will appreciate Stevenson's clear direction, while the experienced will be delighted by newly revealed connections and fresh perspectives.

Silas and Ethel Woodlock retire to spend their twilight years by the sea, only to find themselves traumatised by herring gulls. London journalist Stephen Osmer writes a provocative essay about two people called Nicholas Royle, one a novelist, the other a literary critic. Whether Royle, the literary critic, is having an affair with the beautiful Lily Lynch, and has stolen and published Silas Woodlock's short story, 'Gulls', becomes a race to the death for at least one of the authors. Playfully commenting on the main story are 17 'Hides': primarily about birds, ornithology and films (including Hitchcock's), these short texts give us a different view of the messy business of being human, the fragility of the physical world we inhabit and the nature of writing itself. Witty as well as erudite and delightful in its wordplay, An English Guide to Birdwatching explores the fertile hinterland between fact and fiction. In its focus on birds, climate change, the banking crisis, social justice and human migration, it is intensely relevant to wider political concerns; in its mischief and post-modern (or 'post-fiction') sensibility, it celebrates the transformative possibilities of language and the mutability of the novel itself.

The Rough Guide to Naples, Pompeii and the Amalfi Coast

(Travel Guide eBook) Entrepreneur Press

In many research fields the basic properties of a system have to be deduced from remotely sensed observations rather than from first-hand on the spot measurements. These remotely sensed

data are often difficult to interpret physically because they emerge as severely filtered convolutions of the original source function. The central 'inverse' problem is to transform these data, through integral inversion techniques, into stable and physically meaningful representations of the source. This book gives a general mathematical introduction to the subject and illustrates it with examples and applications in astronomy. The authors outline the classical theory of itegral inversion and illustrate why classical techniques fail, then go on to describe and compare a variety of non-classical techniques. Methods such as regularisation, employing smoothing constraints and the use of a priori information such as non-negativity are carefully explained and applied to contemporary research problems in astronomy. Finally, the way to develop an optimal overall strategy is discussed. This is the first book to address all aspects of inverse problems, from how they occur to their analytic formulation and practical numerical treatments. Enough mathematical detail is incorporated for the text to be self contained. As such it will primarily be of interest to postgraduate and research astronomers and physicists, and to applied mathematicians. Other workers in passive observational studies such as meteorology, and areas of economics and sociology will find chapters on theory and strategy useful. Attention is also drawn to implications of inverse theory for a central tenet in the philosophy of science, namely falsifiability of hypotheses.
