The purpose of code P0128 is to track the amount of time the engine

requires to reach and maintain the correct operating temperature. This enables the fuel system to operate in a "closed loop" condition, where the Fuel Control or Air Fuel Ratio is being actively influenced by the two or more Oxygen Sensors located in the Exhaust System.

**Section 15.1 Troubleshooting the Electronic Engine Control ...**

This means that the engine's powertrain control module (PCM) has detected that the engine has not reached the required temperature level within a specified amount of time after starting the

---

engine. Often, the intent of the P0128 code is to indicate a faulty thermostat (likely stuck in the open condition).
