The Kurds, once marginal in the study of the Middle East and secondary in its international relations, have moved to center stage in recent years. In Turkey, where the Kurdish question is an issue of national significance, and in Iraq, where the gains made by the Kurdistan Regional Government have allowed it to impose its authority, moves are afoot to solve "the Kurdish Question" once and for all. In Syria, where the Kurds have borne the brunt of the Islamic State's onslaught as they defended their three self-declared cantons of Afrin, Kobane, and Cezire, and in Iran, where they struggle to express their cultural distinctiveness and suffer disproportionately at the hands of the Islamic Republic's security and intelligence services, the picture is less positive. Yet the situations in both countries remain in flux, affected by developments in Iraq and Turkey in a manner that suggests we may have to revise the notion of the Kurds being forever divided by the boundaries of the Middle East and subsumed into the state projects of other nations. The contributors to *The Kurdish Question Revisited* offer insights into how this once seemingly intractable, immutable phenomenon is being transformed amid the new political realities of the Middle East.

Environmental Toxicology provides a detailed, comprehensive introduction to this key area of sustainability and public health research. The broad coverage includes sections on ecological risk assessment, monitoring, mechanisms, fate and transport, prevention, and correctives, as well as treatment of the health effects of solar radiation and toxicology in the ocean. The 23 state-of-the-art chapters provide a multi-disciplinary perspective on this vital area, which encompasses environmental science, biology, chemistry, and public health.

The International Conference on Food Engineering is held every four years and draws global participation. ICEF 10 will be held in April 2008 in Chile with the theme of food engineering at interfaces. This will not be a typical proceedings with uneven contributions. Papers will be solicited from each plenary speaker plus two or three invited speakers from each topic and the goal is to publish a book that conveys the interdisciplinary spirit of the meeting as well as covers the topics in depth, creating a strong reference work. The idea is to explore how food engineers have to be prepared in years ahead not only to perform in their normal activities but also to engage in new challenges and opportunities that will make the profession more attractive, responsive, and able to create a larger impact. These challenges and opportunities are within the profession and at interfaces with other areas. A major role of engineers is to incorporate new knowledge into the profession and respond to practical needs. The goal is to explore how food engineers are integrating developments in the basic sciences of physics and chemistry, nutrition, informatics, material sciences, genomics (and other -omics), quality and safety, consumer behavior and gastronomy. Interfaces with the environment, the business sector, regulations and export markets are also important to consider.

This Variorum volume reprints ten papers on contextual elements of the so-called ancient sciences in Islamic societies between the thirteenth and the seventeenth centuries. They address four major themes: the ancient sciences in educational institutions; courtly patronage of science; the role of the astral and other sciences in the Mamluk sultanate; and narratives about knowledge. The main arguments are directed against the then dominant historiographical claims about the exclusion of the ancient sciences from the madrasa and cognate educational institutes, the suppression of philosophy and other ancient sciences in Damascus after 1229, the limited role of the new experts for timekeeping in the educational and professional exercise of this science, and the

marginal impact of astrology under Mamluk rule. It is shown that the muwaqqits (timekeepers) were important teachers at madrasas and Sufi convents, that Mamluk officers sought out astrologers for counselling and that narratives about knowledge reveal important information about scholarly debates and beliefs. Colophons and dedications are used to prove that courtly patronage for the ancient sciences continued uninterrupted until the end of the seventeenth century. Furthermore, these papers refute the idea of a continued and strong conflict between the ancient and modern sciences, showing rather shifting alliances between various of them and their regrouping in the classifications of the entire disciplinary edifice. These papers are suited for graduate teaching in the history of science and the intellectual, cultural and social history of the Middle East and for all readers interested in the study of the contexts of the sciences.

This volume collects a selection of contributions which has been presented at the 23rd Italian Workshop on Neural Networks, the yearly meeting of the Italian Society for Neural Networks (SIREN). The conference was held in Vietri sul Mare, Salerno, Italy during May 23-24, 2013. The annual meeting of SIREN is sponsored by International Neural Network Society (INNS), European Neural Network Society (ENNS) and IEEE Computational Intelligence Society (CIS). The book – as well as the workshop- is organized in two main components, a special session and a group of regular sessions featuring different aspects and point of views of artificial neural networks, artificial and natural intelligence, as well as psychological and cognitive theories for modeling human behaviors and human machine interactions, including Information Communication applications of compelling interest.

Risk-based food safety systems are comprehensive approaches that are used by governments or private parties in assuring food safety. They represent the next step after risk analysis in developing best practices for managing the process of food safety assurance. This chapter uses the risk-based system published in *Enhancing Food Safety: The Role of the Food and Drug Administration (IOM/NRC, 2010)* as scaffolding to discuss the elements of these systems, particularly as they can be used by governments. Risk-based systems include overall strategic planning, risk ranking based on public health, and risk prioritization through targeted information gathering and consideration of other factors that influence priorities. They also include steps for analysis and selection of interventions, design of intervention plans, and monitoring and review. Use of the risk-based system faces several challenges, including the development of an integrated information infrastructure with surveillance, food, behavioral, and economic data, and the building of new analytic capabilities.

Recent outbreaks of illnesses traced to contaminated sprouts

and lettuce illustrate the holes that exist in the system for monitoring problems and preventing foodborne diseases. Although it is not solely responsible for ensuring the safety of the nation's food supply, the U.S. Food and Drug Administration (FDA) oversees monitoring and intervention for 80 percent of the food supply. The U.S. Food and Drug Administration's abilities to discover potential threats to food safety and prevent outbreaks of foodborne illness are hampered by impediments to efficient use of its limited resources and a piecemeal approach to gathering and using information on risks. *Enhancing Food Safety: The Role of the Food and Drug Administration*, a new book from the Institute of Medicine and the National Research Council, responds to a congressional request for recommendations on how to close gaps in FDA's food safety systems. *Enhancing Food Safety* begins with a brief review of the Food Protection Plan (FPP), FDA's food safety philosophy developed in 2007. The lack of sufficient detail and specific strategies in the FPP renders it ineffectual. The book stresses the need for FPP to evolve and be supported by the type of strategic planning described in these pages. It also explores the development and implementation of a stronger, more effective food safety system built on a risk-based approach to food safety management. Conclusions and recommendations include adopting a risk-based decision-making approach to food safety; creating a data surveillance and research infrastructure; integrating federal, state, and local government food safety programs; enhancing efficiency of inspections; and more. Although food safety is the responsibility of everyone, from producers to consumers, the FDA and other regulatory agencies have an essential role. In many instances, the FDA must carry out this responsibility against a backdrop of multiple stakeholder interests, inadequate resources, and competing priorities. Of interest to the food production industry, consumer advocacy groups, health care professionals, and others, *Enhancing Food Safety* provides the FDA and Congress with a course of action that will enable the agency to become more efficient and effective in carrying out its food safety mission in a rapidly changing world.

The social security of a person in the modern world can only be ensured by a purposeful policy and actions of the state and society aimed at achieving it. This requires favorable socio-economic conditions and creating an effective personal security system protecting property and citizens. Human social security can be threatened by phenomena and processes that lead to drastic changes in the life of society and dangerous deformations that entail severe social consequences for the individual, social groups, and institutions. *Regulating Human Rights, Social Security, and Socio-Economic Structures in a Global Perspective* discusses the global regulation of human rights, social security, and socio-economic structures in an era of acute challenges and crises. It presents comprehensive research on political structures and the conflicts within causing challenges to individual identity and insecurity. Covering topics such as legal-socio studies, digital authoritarianism, and regional security, this premier reference source is an essential resource for government officials, politicians, geopolitical experts, economists, non-profit organizations, human rights advocates, libraries, students, researchers, and academicians.

The accelerated globalization of the food supply,

coupled with toughening government standards, is putting global food production, distribution, and retail industries under a high-intensity spotlight. High-publicity cases about foodborne illnesses over recent years have heightened public awareness of food safety issues, and momentum has been building to find new ways to detect and identify foodborne pathogens and eliminate food-related infections and intoxications. This extensively revised 4e covers how the incidence and impact of foodborne diseases is determined, foodborne intoxications with an introduction noting common features among these diseases and control measures that are applicable before and after the basic foodstuff is harvested. This volume comprises the proceedings of the sixth in a series of International Symposia devoted to basic and clinical aspects of urolithiasis. Previous symposia have been held at intervals of four years in Leeds, Madrid, Davos, Williamsburg, and Garmisch-Partenkirchen. The sixth symposium was held in Vancouver, British Columbia and was attended by over 250 participants from 26 countries around the world. As may be seen from the contents of this volume, the meeting covered many aspects of urolithiasis including the underlying physiology, crystal formation and the effects of inhibitors and promoters on crystallization, endocrinology and abnormalities of urinary composition, analyses, geography and epidemiology, and medical and surgical treatment with a special emphasis on extracorporeal lithotripsy. Internationally-recognized authorities gave invited talks in each of these areas, and from the submitted abstracts 30 were selected for oral presentation and the remainder were presented in either general or theme poster sessions. The nine theme-poster sessions provided a particularly valuable and successful feature of the meeting, giving an opportunity for a group of researchers working in related areas to present their posters and also to give a brief oral summary which was followed by discussion with the audience. Each of these poster sessions was chaired by two experts in the field who have provided an overview of each theme-poster session for this volume.

This book provides an opportunity for investigators, government officials, systems scientists, strategists, assurance researchers, owners, operators and maintainers of large, complex and advanced systems and infrastructures to update their knowledge with the state of best practice in the challenging domains whilst networking with the leading representatives, researchers and solution providers. Drawing on 12 years of successful events on information security, digital forensics and cyber-crime, the 13th ICGS3-20 conference aims to provide attendees with an information-packed agenda with representatives from across the industry and the globe. The challenges of complexity, rapid pace of change and risk/opportunity issues associated with modern products, systems, special events and infrastructures. In an era of unprecedented volatile, political and economic environment across the world, computer-based systems face ever more increasing challenges, disputes and responsibilities, and whilst the Internet has created a global platform for the exchange of ideas, goods and services, it has also created boundless opportunities for cyber-

crime. As an increasing number of large organizations and individuals use the Internet and its satellite mobile technologies, they are increasingly vulnerable to cyber-crime threats. It is therefore paramount that the security industry raises its game to combat these threats. Whilst there is a huge adoption of technology and smart home devices, comparably, there is a rise of threat vector in the abuse of the technology in domestic violence inflicted through IoT too. All these are an issue of global importance as law enforcement agencies all over the world are struggling to cope.
