Advanced Search. The chassis is one of the main components of the vehicle, which provides not only support and stiffness but also gives the vehicle its shape. Its design is a challenge for the mechanical engineer: to achieve an optimum resistance-weight ratio which can ensure the safety of the pilot. To optimize its design, engineers can rely on the Finite Element Analysis (FEA) an ideal method to predict the behavior of the chassis to the different loads (Mechanical Effort, fatigue ...

ANSYS Tutorials & Projects for BAJA-SAE. For proper analysis of your vehicle you need to conduct structural analysis of your cage for side, roll, front, rear & torsional impacts. The primary aim in your analysis should be to reduce weight of the vehicle and to test for failure. The un-sprung weight, rotating mass and roll cage are primary weight reduction areas and you should try to reduce the weight of your car to 300 kg with higher stiffness of the roll cage to help your car achieve the ...
