Depersonalization-derealization
disorder - Wikipedia
Depersonalization-derealization
disorder, is a mental disorder in
which the person has persistent or
recurrent feelings of
depersonalization or
derealization. Depersonalization
is described as feeling
disconnected or detached from

one's self. Individuals may report
feeling as if they are an outside
observer of their own thoughts or
body, and often report feeling a
loss of control over their
thoughts or actions. Derealization
is described as detachment from
one's surroundings. Individuals
experie

Depersonalization Test (DDD) **| Psychology**

Both depersonalization and
derealization are part of the
same disorder. The difference
is that depersonalization
refers to the experience of
one's self – feeling like a
robot or feeling detached
from your own body, while
derealization refers to the
experience of feeling that
the world around you is
unreal.

Depersonalisation Disorder - Anxiety UK

Depersonalization &
Derealization (Feeling unreal)
A message from Rob: It's
unfortunate that many doctors
and psychotherapists do not

understand this condition. It's
mostly to do with the simple
lack of research. Although
Depersonalization Disorder
(DPD) is listed as a
Dissociative Disorder and
sufferers do not report the
same symptoms as anxiety, the
reality is that DPD shares many
of the same characteristics of
anxiety and depression.

Feeling Unreal: **Depersonalization Disorder and** **the Loss of ...**

"Depersonalization disorder
(DPD) is a thing unto itself.
It is a condition that is
inherently deceptive and
contradictory, and yet, the
common threads of a sense of
unreality and the loss of the
independent, individual self
usually persist throughout its
duration. Its symptoms are
finite, clearly defined, and
delineated after a century of
study.

Feeling Unreal: **Depersonalization Disorder and** **the Loss of ...**

Depersonalization, the experience of feeling disconnected from one's sense of self, is a common symptom associated with PTSD and trauma. In fact, it's so common that in the DSM-5 it is included, along with the closely related symptom of derealization, in the criteria for an Acute Stress Disorder and as a specifier for PTSD.

Feeling Unreal: Depersonalization Disorder and the Loss of ...
Depersonalisation Disorder is the experience of feeling unreal, detached, and often, unable to feel emotion. It is a phenomenon characterised by a disruption in self-awareness and emotional numbness, where many people feel that they are disconnected or estranged from one's self. Many people experience depersonalisation during a panic attack and this is often characterised as the

peak level of anxiety.

Depersonalization disorder is characterized by a detachment from one's sense of self and one's surroundings that leads to considerable distress and impairment yet an intact testing of reality....
