Social media is a new technology that not only allows for another channel of broadcasting messages to the public, but also allows for two way communication between emergency managers and major stakeholder groups. Increasingly the public is turning to social media technologies to obtain up to date information during emergencies and to share data about the disaster in the form of geo data, text, pictures, video, or a combination of these media. Social media also can allow for greater situational awareness for emergency responders. While social media allows for many opportunities to engage in an effective conversation with stakeholders, it also holds many challenges for emergency managers. The purpose of this course is to provide the participants with best practices including tools, techniques and a basic roadmap to build capabilities in the use of social media technologies in their own emergency management organizations (State, local, Tribal) in order to further their emergency response missions. By the end of this course, participants will be able to: Explain why social media is important for emergency management Describe the major functions and features of common social media sites currently used in emergency management Describe the opportunities and challenges of using social media applications during the 5 phases of emergency management Describe better practices for using social media applications during the 5 phases of emergency management Describe the process for building the capabilities and to sustain the use of social media in an emergency management organization (State, local, tribal, territorial)"

This book provides up-to-date coverage of fundamental concepts for the design of computers and their subsystems. It presents material with a serious but easy-to-understand writing style that makes it accessible to readers without sacrificing important topics. The book emphasizes a finite state machine approach to CPU design, which provides a strong background for reader understanding. It forms a solid basis for readers to draw upon as they study this material and in later engineering and computer science practice. The book also examines the design of computer systems, including such topics as memory hierarchies, input/output processing, interrupts, and direct memory access, as well as advanced architectural aspects of parallel processing. To make the material accessible to beginners, the author has included two running examples of increasing complexity: the Very Simple CPU, which contains four instruction sets and shows very simple CPU design; and the Relatively Simple CPU which contains 16 instruction sets and adds enough complexity to illustrate more advanced concepts. Each chapter features a real-world machine on which the discussed organization and architecture concepts are implemented. This book is designed to teach computer organization/architecture to engineers and computer scientists.

Considering Cumulative Effects Under the National Environmental Policy Act Michael Lantrip

Points of Distribution . Points of Distribution are centralized locations where the public picks up life sustaining commodities following a disaster or emergency . Commodities usually include shelf stable food and water What are Points of Distribution or PODs? During a disaster, one method of issuing supplies may not be enough. A Local Emergency Management Agency (LEMA) could use other distribution systems or use all of them at once. All three complement each other and provide expanded distribution coverage. For this Guide, we will focus on Points of Distribution or PODs. PODs can accommodate vehicle traffic (drive-thru), pedestrian traffic (walk thru), and mass transit traffic (bus or rail). Each person or vehicle receives a set amount of supplies. The recommended amount is for each person/vehicle to receive enough for a household of three. The amount of supplies provided will differ depending on the type of transportation used. For instance, more supplies are provided to someone in a car than to a pedestrian who must

hand carry items."
