"Part of The US Army Large-Scale Combat Operations Series, Deep Operations compares and contrasts US and Soviet theoretical approaches to deep operations. It provides readings that outline the theoretical approach to conducting deep operations in order to prevail and win. The US Army may be well served to look at how operations were done in the past in order to gain insight into not only what an adversary is doing, but why they are doing operations in a certain way"--

The title that the authors have chosen for this book, The Causes and Cures of Criminality, suggests that it may be just another book speculating on the sociological evils that need to be put right for "everything in the garden to be lovely." If this is the expectation, the reader could not be more mistaken. The recurrent theme, in fact, is a strong accent on psychological experiments. Both authors have tackled the theoretical and practical side of crime through an exhaustive literature review of past experimental work. Hans J. Eysenck has concentrated on the constitutional and biological theory of criminality, whereas Gisli Gudjonsson has concerned himself more with a review of ongoing research into therapy and possible prevention of antisocial behavior. Part I goes into considerable detail on the causes of criminality, stressing much of the strangely neglected area of individual differences in personality. Research studies point to a very heavy involvement of heredity in the causation of criminality, but the authors are careful to acknowledge that much can be done environmentally to discourage a life of crime once those persons who are at risk have been identified.

[Introductory Grammar of Amharic](#) Haynes Manuals
This book closes the gap for beginners who want to study the Amharic language and had difficulties in finding the right grammar for this purpose: The first grammar of Amharic, the national language of Ethiopia, was published by Hiob Ludolf in 1698. The Amharic grammar published by Praetorius in 1879 is based on Amharic religious texts and on scattered material, usually composed by missionaries. A milestone in the study of Amharic is Marcel Cohen's Traite de langue amharique (1936), but this grammar, too is not completely suited for beginners since the author's generalizations are at times aimed at linguists. The grammar that comes closest to the concept of a beginner's grammar is that of C.H. Dawkin (1960), yet this grammar is extremely short, does not give examples and does not introduce the student to the intricacies of the language. The new book gives all the grammatical forms and the sentences of the present grammar in Amharic script and in phonetic transcription. The illustrative examples have a free and a literal translation. This procedure should likewise prove

to be useful for the Semitist as well as for the general linguist.

In 1981, Plenum Press published a text entitled The Nature and Treatment of the Stress Response by Robert Rosenfeld, M. D. , and me. That text attempted to do what no other text from a major publisher had previously attempted, that is, to create a clinically practical guide for the treatment of excessive stress and its arousal-related syndromes-this to be captured between the same covers in combination with a detailed, clinically relevant pedagogy on the neurological and endocrinological foundations of the stress response itself. That volume has enjoyed considerable success having found markets among practicing professionals and clinical students as well. The fields of psychosomatic medicine, health psychology, behavioral medicine, and applied stress research have appreciably expanded their boundaries since the publication of the aforementioned volume. Although remarkably little of the clinical utility of that volume has been eroded with time, it was felt that an updated and more integrative clinical textbook needed to be offered to practicing clinicians and students within clinical rather than simply create a second edition of training programs. Therefore, was made to create a significantly revised the original volume, the decision and expanded volume that would cover many of the same topics as the original volume but would provide a primary emphasis on the treatment of excessive stress and that would employ an integrative phenomenological model to facilitate that end. This present volume entitled A Clinical Guide to the Treatment of the Human Stress Response is the result.
