The pulmonary circulation  
bypassed in the unborn fetal pig  
because there is no need for the  
blood to go to the lungs and "pick  
up" blood as the fetus is not  
breathing in the womb. The fetus'  
mother is providing all of its  
oxygenation needs via umbilical  
artery.

Through the dissection of the  
fetal pig, we were able to  
compare and contrast the  
structure and functions of the  
organs to those of a human.  
We dissected the pig and  
observed all the exterior and  
interior structures. We found  
that because both are  
mammals, the fetal pig ' s  
structure was almost identical  
to the human body.
