With the growth of modern computing power it has become possible to apply far more mathematics to real problems. This has led to the difficulty that many people who have been working in various jobs suddenly find themselves not understanding the modern processing which is being applied to their own professional field. It also means that the people presently being trained in these subjects need to understand a much wider range of mathematics than in the past. It is to both of these groups that this book is addressed. The major objective is to present the reader with the basic mathematical understanding to follow the new developments in their own field. The mathematics in this book is based on the need to understand signal processing. The modern work in this area is mathematically very sophisticated and our purpose is not to train professional mathematicians but to make far more of the literature accessible. Since this book is based on courses devised for Racal Geophysics there is clearly going to be a bias towards the applications in that area, as the title implies. It is also true that the bibliography has been chosen in order to aid the reader in that field

by pointing them in the direction of recent applications in geophysics.

The political ideas of John Adams, Alexander Hamilton, John Jay, Thomas Jefferson, James Madison, and other Founders of the United States have been a rich civic legacy for successive generations of citizens. An important means of ensuring that these ideas on constitutional government continue to inspire and guide people in the 21st century lies in the curricula of secondary schools. Students need exposure to the constitutional thought of the Founders, and the documents that contain the Founders' ideas, if they are to be expected to think critically about these ideas in order to identify and maintain the best of them and to modify and improve upon the rest of them. Current secondary school curricula are flawed by neglect of core ideas in the political thought of the Founders. This volume is designed to address this flaw; its contents highlight the constitutional thought of important Founders in scholarly essays and teaching plans for high school history and government teachers and in document-based learning materials for students. The volume contains nine units, each of which is based on the ideas and primary sources found in essays originally published in "This Constitution: A Bicentennial Chronicle." Each of the nine units includes four elements: (1) An "Introduction" that announces the topic and main ideas of the constitutional government unit; (2) an essay written by a scholar that highlights primary sources on political ideas of one or more of the Founders of the United States; (3) a teaching plan for high school history and government teachers to guide their use of learning materials for students based upon the essay; and (4) a lesson for high school students of history and government designed to teach ideas in primary sources featured in the scholarly essay.
