This book presents recent advances in the development of biomaterials for industrial applications, and discusses the potential for substituting environmentally hazardous substances with environmentally friendly and degradable components. Focusing on both the material development and production technologies, it reviews different materials, as well as new production technologies and application areas. It also highlights the importance of incorporating organic materials into different composites to enable consumption of otherwise waste materials. Further it addresses biopolymers for the food industry, e.g. edible films and coatings in food production and biodegradable materials; the automotive industry; bio fuels, such as biodiesel based on organic constituents; and green composites in marine applications. Environmental protection aspects related to the protection of cultural heritage, and new nanoparticles, such as nano zerovalent iron, are also reviewed. Aimed at young researchers, professionals, chemical engineers and marine engineers, the book is the result of the joint efforts of different academic and research institutions participating in the WIMB Tempus project, 543898-TEMPUS-1-2013-1-ES-TEMPUS-JPHES, "Development of Sustainable Interrelations between Education, Research and Innovation at WBC Universities in Nanotechnologies and Advanced Materials where Innovation Means Business", co-funded by the European Union Tempus Program.

Negative theology is the attempt to describe God by speaking in terms of what God is not. Historical affinities between Jewish modernity and negative theology indicate new directions for thematizing the modern Jewish experience. Questions such as, What are the limits of Jewish modernity in terms of negativity? Has this creative tradition exhausted itself? and How might Jewish thought go forward? anchor these original essays. Taken together they explore the roots and legacies of negative theology in Jewish thought, examine the viability and limits of theorizing the modern Jewish experience as negative theology, and offer a fresh perspective from which to approach Jewish intellectual history.

Sharon Farmer here investigates the ways in which three medieval communities—the town of Tours, the basilica of Saint-Martin there, and the abbey of Marmoutier nearby—all defined themselves through the cult of Saint Martin. She demonstrates how in the early Middle Ages the bishops of Tours used the cult of Martin, their fourteenth-century predecessor, to shape an idealized image of Tours as Martin's town. As the heirs to Martin's see, the bishops projected themselves as the rightful leaders of the community. However, in the late eleventh century, she shows, the canons of Saint-Martin (where the saint's relics resided) and the monks of Marmoutier (which Martin had founded) took control of the cult and produced new legends and rituals to strengthen their corporate interests. Since the basilica and the abbey differed in their spiritualities, structures, and external ties, the canons and monks elaborated and manipulated Martin's cult in quite different ways. Farmer shows how one saint's cult lent itself to these varying uses, and analyzes the strikingly dissimilar Martins that emerged. Her skillful inquiry into the relationship between group identity and cultural expression illuminates the degree to which culture is contested territory. Farmer's rich blend of social history and hagiography will appeal to a wide range of medievalists, cultural anthropologists, religious historians, and urban historians.

Accepting Dante's prophetic truth claims on their own terms, Teodolinda Barolini proposes a "detheologized" reading as a global new approach to the *Divine Comedy*. Not aimed at excising theological concerns from Dante, this approach instead attempts to break out of the hermeneutic guidelines that Dante structured into his poem and that have resulted in theologized readings whose outcomes have been overdetermined by the poet. By detheologizing, the reader can emerge from this poet's hall of mirrors and discover the narrative techniques that enabled Dante to forge a true fiction. Foregrounding the formal exigencies that Dante masked as ideology, Barolini moves from the problems of beginning to those of closure, focusing always on the narrative journey. Her investigation—which treats such topics as the visionary and the poet, the One and the many, narrative and time—reveals some of the transgressive paths trodden by a master of mimesis, some of the ways in which Dante's poetic adventuring is indeed, according to his own lights, Ulyssean.

Stability theory has allowed us to study both qualitative and quantitative properties of dynamical systems, and control theory has played a key role in designing numerous systems.

---

Contemporary sensing and communication networks enable collection and subscription of geographically-distributed information and such information can be used to enhance significantly the performance of many of existing systems.

Through shared sensing/communication network, heterogeneous systems can now be controlled to cooperate robustly and autonomously; cooperative control is to make the systems act as one group and exhibit certain cooperative behavior, and it must be pliable to physical and environmental constraints as well as be robust to intermittency, latency and changing patterns of the information flow in the network. This book attempts to provide a detailed coverage on the tools of and the results on analyzing and synthesizing cooperative systems. Dynamical systems under consideration can be either continuous-time or discrete-time, either linear or non-linear, and either unconstrained or constrained. Technical contents of the book are divided into three parts. The first part consists of Chapters 1, 2, and 4. Chapter 1 provides an overview of cooperative behaviors, kinematical and dynamical modeling approaches, and typical vehicle models. Chapter 2 contains a review of standard analysis and design tools in both linear control theory and non-linear control theory. Chapter 4 is a focused treatment of non-negative matrices and their properties, multiplicative sequence convergence of non-negative and row-stochastic matrices, and the presence of these matrices and sequences in linear cooperative systems.

For the greater part of recorded history the most successful and powerful states were autocracies; yet now the world is increasingly dominated by democracies. In *A Free Nation Deep in Debt*, James Macdonald provides a novel answer for how and why this political transformation occurred. The pressures of war finance led ancient states to store up treasure; and treasure accumulation invariably favored autocratic states. But when the art of public borrowing was developed by the city-states of medieval Italy as a democratic alternative to the treasure chest, the balance of power tipped. From that point on, the pressures of war favored states with the greatest public creditworthiness; and the most creditworthy states were invariably those in which the people who provided the money also controlled the government. Democracy had found a secret weapon and the era of the citizen creditor was born. Macdonald unfolds this tale in a sweeping history that starts in biblical times, passes via medieval Italy to the wars and revolutions of the seventeenth and eighteenth centuries, and ends with the great bond drives that financed the two world wars.
