Stefan R. Thallmaier's investigation enables mass customization businesses to better understand how co-design increases customers' value perception. He focuses on the increasing proliferation of service channels (online, mobile and in-store) and digital media (toolkits, social media and live help) at the co-design interface. Based on qualitative and quantitative research, the author examines how this proliferation impacts customers' value perception in the different stages of the co-design process. The research shows that customers' value perception profits from varying levels of social presence throughout the co-design process. The work helps researchers and practitioners with surprising insights as well as hands-on recommendations to improve and adapt interfaces for customer co-design.

This book is the third volume in the *Leadership Horizons* series. This series, started by Jim Meindl, is devoted to new developments in theory and research on leadership within the context of continuing and emerging organizational issues. In this spirit, the present volume delves into implicit leadership theories (ILTs), and opens intriguing new avenues for research on ILTs, but does so while maintaining an eye on the past. For example, the book offers valuable historical perspectives from those who were "there" - Dov Eden and Uriel Leviatan share the inside scoop on the origination of the concept of ILTs, and Bob Lord traces the evolution of social-cognitive perspectives with respect to work on ILTs - while all authors raise interesting questions and offer important new directions to advance this work well into the future. It features a wide range of scholars and perspectives, and practical implications are implicit and explicit throughout the volume. The book offers a valuable resource for researchers, students, and practitioners interested in leadership and social cognition in the workplace.
