China has huge ethnic minorities – over 40 different groups with a total population of over 100 million. Over time China’s policies towards minority languages have varied, changing from policies which have accommodated minority languages to policies which have encouraged integration. At present integrationist policies predominate, notably in the education system, where instruction in minority languages is being edged out in favour of instruction in Mandarin Chinese. This book assesses the current state of indigenous and minority language policy in China. It considers especially language policy in the

education system, including in higher education, and provides detailed case studies of how particular ethnic minorities are being affected by the integrationist, or assimilationist, approach.

This book is the third volume in the Leadership Horizons series. This series, started by Jim Meindl, is devoted to new developments in theory and research on leadership within the context of continuing and emerging

organizational issues. In this spirit, the present volume delves into implicit leadership theories (ILTs), and opens intriguing new avenues for research on ILTs, but does so while maintaining an eye on the past. For example, the book offers valuable historical perspectives from those who were "there" - Dov Eden and Uriel Leviatan share the inside scoop on the origination of the concept of ILTs, and Bob Lord traces the evolution of social-cognitive perspectives with respect to work on ILTs - while all authors raise interesting questions and offer important new directions to advance this work well into the future. It features a wide range of scholars and perspectives, and practical implications are implicit and explicit throughout the volume. The book offers a valuable resource for researchers, students, and practitioners interested in leadership and social cognition in

the workplace.
