Fieldbuses For Process Control Engineering Operation

Process fieldbuses are designed to communicate with process instruments and actuators. The two most common are Profibus PA and Foundation fieldbus (FF). Process fieldbus deployments began in oil refineries and chemical plants where there are often huge populations of devices, but adoption has spread into many more areas such as water treatment and pharmaceutical manufacturing.

Fieldbuses For Process Control: Engineering, Operation And ... The book covers the three leading process fieldbus technologies: HART, FOUNDATION™ Fieldbus and PROFIBUS-PA. It covers both the field-level and the Ethernet-based host-level networking. The text also addresses concerns and solutions for interoperability, integration and migration as well as availability and safety.

Control Engineering | Fieldbus in the field

Fieldbus is the name of a family of industrial computer networks used for real-time distributed control. Fieldbus profiles are standardized by the International Electrotechnical Commission as IEC 61784/61158. A complex automated industrial system is typically structured in hierarchical levels as a distributed control system. In this hierarchy the upper levels for production managements are linked to the direct control level of programmable logic controllers via a non-time-critical communications

Fieldbus - Wikipedia

The HART specification requires that a HART Master (the device issuing HART commands) be connected to a nominal load of 250R. If your load is too far from this, communications will either not work at all or be intermittent.
