The field of semantic computing is highly diverse, linking areas such as artificial intelligence, data science, knowledge discovery and management, big data analytics, e-commerce, enterprise search,

technical documentation, document management, business intelligence, and enterprise vocabulary management. As such it forms an essential part of the computing technology that underpins all our lives today. This volume presents the proceedings of SEMANTiCS 2021, the 17th International Conference on Semantic Systems. As a result of the continuing Coronavirus restrictions, SEMANTiCS 2021 was held in a hybrid form in Amsterdam, the Netherlands, from 6 to 9

September 2021. The annual SEMANTiCS conference provides an important platform for semantic computing professionals and researchers, and attracts information managers, IT-architects, software engineers, and researchers from a wide range of organizations, such as research facilities, NPOs, public administrations and the largest companies in the world. The subtitle of the 2021 conference 's was " In the Era of Knowledge Graphs " , and 66 submissions were received, from which the 19 papers

included here were selected following a rigorous single-blind reviewing process; an acceptance rate of 29%. Topics covered include data science, machine learning, logic programming, content engineering, social computing, and the Semantic Web, as well as the additional sub-topics of digital humanities and cultural heritage, legal tech, and distributed and decentralized knowledge graphs. Providing an overview of current research and development, the book will be of interest to all those working in the field of semantic systems. ITF Research Reports

Adapting Transport to Climate Change and Extreme Weather Implications for Infrastructure Owners and Network Managers MathLinks 7Linux Network Administrator's Guide 1001 Walks You Must Experience Before You Die is the perfect guide to the world's most exhilarating walks. The ever-increasing passion for recreational walking is given fresh impetus with the creation of each new national park and wilderness area, the construction of every new walkway and the clearing of another fresh trail. The growth in popularity of pathways and woodland walks, and the conversion of canal banks and disused railways around the world to mixed-use walkand

cycle-ways, means we now have unprecedented access to our cities and to ever-increasing tracts of our rural heritage. The wide-ranging, carefully chosen featured routes vary from the rugged delights of Wales's Pembrokeshire Coastal Path to the lush wilderness of Jamaica and the Harz Witches' Trail high in the German mountains. The hand-picked excursions cover overland paths, urban trails, mountain passes, coastal and shoreline strolls, and walks that explore the heritage of the world's most culturally rich destinations. There are gentle walks for beginners - some lasting barely an hour - and more demanding challenges for seasoned enthusiasts that will take months to

achieve. Every page provides a wealth of information about a must-try walk, including start and end points, overall distance, difficulty rating, terrain and an estimation of the time it should take to complete, along with links to specially commissioned digital route maps. In short, 1001 Walks You Must Experience Before You Die is an essential reference guide for all those who love to get out of their cars, get off their bikes and lace up their walking shoes. The Practicing Poet Macmillan This is the first book by Carlos Taibo, a prolific and well-known social theorist in Spain, to be translated into English. Published in

language in 2013, Rethinking Anarchy functions as both an introduction to and in-depth interrogation of anarchism as political philosophy and political strategy. Taibo introduces the basic tenets of anarchism while also diving into and unpacking the debates around each of them, producing a book that should appeal to both beginners and

readers with extensive knowledge of the book's theme. Topics touched upon include liberal versus direct democracy, the nature of the state and its relationship to capitalism, the role of autonomous and anticapitalist social spaces, and how anarchism relates to feminism, environmentalism, antimilitarism, and other struggles. 1001 Walks Open Road +

Grove/Atlantic Modeling Uncertainty in the Earth Sciences highlights the various issues, techniques and practical modeling tools available for modeling the uncertainty of complex Earth systems and the impact that it has on practical situations. The aim of the book is to provide an introductory overview which covers a broad range of tried-and-tested tools. Descriptions of concepts, philosophies, challenges,

methodologies and workflows give the reader an understanding of the best way to make decisions under uncertainty for Earth Science problems. The book covers key issues such as: Spatial and time aspect; large complexity and dimensionality; computation power; costs of 'engineering' the Earth; uncertainty in the modeling and decision process. Focusing on reliable and practical methods this book provides an invaluable

primer for the complex area of decision making with uncertainty in the Earth Sciences. How I Became Hettie Jones Lehigh University Press This Green Paper sets out plans for fundamental changes to the criminal justice system and addresses the three priorities of punishing offenders, protecting the public and reducing reoffending. It seeks to set out an

intelligent sentencing framework, coupled with more effective rehabilitation. Despite a 50% increase in the budget for prisons and managing offenders in the last ten years, almost half of all adult offenders released from custody reoffend within a year as well as 75% of youth custody offenders. These proposed reforms will seek to make prisons places

of hard work and industry. There will be a greater use of strenuous, unpaid work as part of a community sentence alongside tagging and curfews. There will also be a greater focus on the enforcement and collection of fines, and a much stronger emphasis on compensation for victims of crime. Six new rehabilitation programmes will be piloted on a payment by results

basis. Treatment rather than prison will be the option for the less serious offenders with mental illness and drug dependency. The proposals also seek to introduce more straightforward sentencing alongside greater transparency from the courts. The publication is divided into seven chapters, covering the following areas: punishment and payback; rehabilitating

offenders to reduce crime; payment by results; sentencing reform; youth justice and working with communities to reduce crime, along with two annexes.

[Linux Network Administrator's Guide](#) Tyndale House Publishers, Inc. This volume is dedicated to Hiroakira Ono's work on substructural logics. Chapters, written by well-established

academics, cover topics related to universal algebra, algebraic logic and the Full Lambek calculus; the book includes a short biography about Hiroakira Ono. The book starts with detailed surveys on universal algebra, abstract algebraic logic, topological dualities, and connections to computer science. It further contains specialised contributions on connections to formal languages (recognizability in residuated lattices and

connections to the finite embedding property), covering systems for modal substructural logics, results on the existence and disjunction properties and finally a study of conservativity of expansions. This book will be primarily of interest to researchers working in algebraic and non-classical logic. Sustainability Criteria for Water Resource Systems OECD Publishing

Literature and Technology John Wiley & Sons This biography offers a fresh understanding of the life and work of Spanish composer

Manuel de Falla (1876-1946), recognized as the greatest composer in the Spanish cultural renaissance that extended from the latter part of the 19th century until the outbreak of the Spanish Civil War in 1936. The biography incorporates recent research on Falla, draws on untapped sources in the Falla archives, reevaluates Falla's work in terms of current issues in musicology, and considers Falla's accomplishments in their historical and cultural

contexts. Essential Cell Biology Routledge This book provides state-of-the-art contemporary research insights into key applications and processes in open world learning. Open world learning seeks to understand access to education, structures, and the presence of dialogue and support systems. It explores how the application of open world and educational technologies can be used to create opportunities for open and high-quality education.

Presenting groundbreaking research from an award winning Leverhulme doctoral training programme, the book provides several integrated and cohesive perspectives of the affordances and limitations of open world learning. The chapters feature a wide range of open world learning topics, ranging from theoretical and methodological discussions to empirical demonstrations of how open world learning can be effectively implemented, evaluated, and used to inform theory and practice. The

book brings together a range of innovative uses of technology and practice in open world learning from 387,134 learners and educators learning and working in 136 unique learning contexts across the globe and considers the enablers and disablers of openness in learning, ethical and privacy implications, and how open world learning can be used to foster inclusive approaches to learning across educational sectors, disciplines and countries. The book is unique in exploring the complex,

contradictory and multi-disciplinary nature of open world learning at an international level and will be of great interest to academics, researchers, professionals, and policy makers in the field of education technology, e-learning and digital education.

literature and language theory to writings about technology (as distinguished from science). The interdisciplinary character of these essays is further enriched by drawing upon contemporary studies of the philosophy and history of technology, which provide the context for the first essay (Mitcham and Casey). Subsequent essays examine technology from many points of view - how technology shapes texts and contexts, as well

as how writers shape perspectives on technology. The essays examine texts as diverse as seventeenth-century science and twentieth-century children's literature and spy fiction. Major authors investigated include Chaucer, Blake, Romains, Pynchon, and Prigogine. Individual essays consider: Chaucer's use of mapmaking as a coercive technology (Tomasch), the Renaissance fascination with mechanical contrivances and

their depiction (Knoespel), the contexts within which Boyle and his successors described the air pump (Markley), Blake's manifold interests in the technology of printing (Greenberg), Romains's development of a philosophy of poetry appropriate to early twentieth-century technology in Paris (Williams), gender issues in children's literature about machines (Lee), technology in the modern spy novel (Slade), Thomas Pynchon's mixed

feelings about technology and its value (Schachterle), and the relations between postmodern fiction and the technology of thermodynamics, as developed by Nobel laureate Ilya Prigogine (Porush). The editors of *Literature and Technology* have been active in the formation and direction of the Society for Literature and Science. In their introduction to this collection, they consider what characterizes literature and technology as a

new and fertile field for interdisciplinary study. This volume concludes with selected bibliographies of basic references in the philosophy of technology and of works devoted to the examination of the relationships between literature and technology. *Membership Directory* Oxford University Press on Demand
