Pushing and pulling film refers to up- and down-rating your film

to a higher or lower ISO. This can happen during the

photography stage or the printing stage. When you push or up-

rate your film, you are telling the camera that the film has a

higher ISO than it actually does. This allows your light meter to

correctly expose for the faster film speed.

Start off with cheaper film and move up the ladder as your progress. Low

ISO film (50-200) is better for sunny conditions, while higher ISO film

(400+) suits dreary weather and indoor photography.
