Finance equations and surveys are often used to help individuals and  
families plan for their financial futures. When business students are  
learning basic principals of finance, they must memorize several  
equations that are subsequently used in the algorithms behind  
questionnaires that investment companies offer to their customers.  
These equations and answers translate into retirement planning,  
investment options, and mortgage amortization schedules that are  
quite useful. Business managers, advertising professionals, and  
entrepreneurs also benefit from a basic understanding of these  
essential equations. The formulas are designed to help these  
professionals know how to effectively run a business for profit while  
maintaining minimal expenditures.

**Finance Terminology (Speedy Study Guide)** Prentice Hall Finance is a matter that surrounds everybody's day-to-day life but not many people really understand how it works. The core definition is "the management of money and the speculation of its future value". It sounds complicated, but in reality the concept is simple. For example: whenever you purchase something with a credit card, the bank temporarily foots the bill. They give you a certain amount of time (which is usually about 30 days) to pay the balance in full. Even if you can't pay the full balance right away, you can always make payments with a little interest. It's a benefit for both sides. This benefits you if you can't pay right away and this benefits the bank because they make money on merchant fees and interest. ?
