We have spent a great deal of time on the continued development of accounting and auditing standards, which are used as a primary component of corporate reporting, to reach today's financial reporting framework. However, is it possible to say that, currently, financial statements provide full and prompt disclosure? Or will they still be useful as a primary

element with their current structures in corporate reporting? Undoubtedly, we are deeply concerned about these issues in recent times. This volume contains chapters to discuss the today's and tomorrow's accounting and corporate reporting phenomena in a comprehensive and multidimensional way. Therefore, this book is organized into six sections: "Achieving Sustainability through Corporate Reporting", "International Standardization", "Financial Reporting Quality", "Accounting Profession and Behavioral Aspects", "Public Sector Accounting and Reporting", and "Managerial Accounting".

Creating the 'Big Mess' and its sequel Accounting for Crises use Marx's theory of capitalism to explain why there is no generally accepted theory of financial accounting, and explore the consequences, by studying the history of American accounting theory from c.1900 to 2007. The answer, Creating the 'Big Mess', is

first that while late-19th century British accounting principles, founded on the going-concern concept, provided an objective basis for holding management accountable to shareholders for its stewardship of capital, and were accepted by the nascent American profession, they are inchoate. Second, Irving Fisher's economic theory of accounting, based on the assertion that present value is the accountants' measurement ideal, which is subjective, framed early-20th century American accounting theory, which undermined British principles, making them incoherent. In an unregulated, pro-business environment, leading theorists, particularly Henry Rand Hatfield and William A. Paton, Jr., became authorities for management discretion, creating the 'big mess' Hatfield saw in late-1920s American accounting. Accounting for Crises examines the roles of Fisher's theory in promoting the speculation leading to the 1929 Great Crash, aggravating the Great Depression, hindering accounting regulation from the 1930s, producing the Financial Accounting Standard Board's conceptual framework, and facilitating

the 2007-2008 Global
Financial Crisis.
