Financial Accounting, Ninth Edition

This book comprehensively describes social responsibility and sustainable development, with contributions from scientists and representatives from industry working in the field. The papers are innovative, cross-cutting and many share practice-based experiences, some of which may be replicable elsewhere. Prepared by the Inter-University Sustainable Development Research Programme (IUSDRP) and the World Sustainable Development Research and Transfer Centre (WSD-RTC), it reiterates the current need to promote social responsibility. Social responsibility and sustainable development are two different concepts, whose integration over the years has led to significant advances in the way enterprises consider the social and environmental impact of their operations. It is also argued that stakeholders only should be interested in the greater good and not in profit maximization, but it is also about social equality and environmental accountability, also bearing in mind the links with eco-efficiency, innovation, and the health and well-being of workers. According to ISO 26000, social responsibility is the responsibility of an organisation for the impacts of its decisions and activities on society and the environment, and it is an obligation of all societies to the societies in which they live. The book provides a sound basis for readers contemplating further research and developments of this subject area.

George Herbert Mead (1863-1931) is a founding figure in the field of sociology. His stature is comparable to that of his contemporaries Emile Durkheim and Max Weber. Mead’s contribution was a profound and unique American theory that analyzed society and the individual as social objects. As Mead saw it, both society and the individual emerged from cooperative, democratic processes linking the self, the other, and the community. Mary Jo Deegan, a leading scholar of Mead’s work, traces the evolution of his thought, its continuity and change. She is particularly interested in the most controversial period of Mead’s work, in which he addressed topics of violence and the nation-state. Mead’s theory of war, peace, and society emerged out of the historical events of his time, particularly World War I. During this period he went from being a pacifist, along with his contemporaries John Dewey and Jane Addams, to being a strong advocate for war. From 1917-1918 Mead became a leader in voicing the need for war based on his theory of self and society. After the war, he became disillusioned with President Woodrow Wilson, with Americans’ failure to support mechanisms for international arbitration, and with the political reasons for American participation in World War I. He returned to a more pacifist and co-operative model of behavior during the 1920s, when he became less political, more abstract, and more withdrawn from public debate. The book includes Deegan’s interpretation of Mead’s early social thought, his friendship and family networks, the historical context of America at war, and the importance of analysis of violence and the state from Mead’s perspective. She also provides illustrative selections from Mead’s work, much of which was previously unpublished.
