The biggest corporate failure ever in British history occurred in 2008 with very little forewarning. The management of HBOS, a major national bank with a long history of prudence prior to the merger in 2001, were allowed to act incompetently. Auditors and regulators failed to act, ignoring a key senior whistleblower, and the 'competitive' stock market failed to spot management failure in time. This book is the first academic study of this collapse, uncovering some surprising evidence on the power and politics of large financial institutions. It details the processes and degrees to which financial challenge and regulation are undermined by this power. The research exposes a pro-active process of regulatory risk management by these institutions; the ease with which auditors and regulators can be captured; and how politicians and investors can be all too happy to hop on the stock market and management spin ride - with other people's money. The study questions the ideology and politics which supported and encouraged the management hubris, raising profound questions about the 'politics' of the academic disciplines of banking, finance and accounting today, and the theories they underpin. This account of management gone wrong is essential reading for students, researchers and professionals involved in banking, finance, credit infrastructure, economics and management studies.

In countries such as the United Kingdom, the need to manage finances in a professional manner has been hampered by the severe fiscal constraints of the 2008 financial crisis. These pressures are likely to persist in the long term as a result of an aging population and rising public expectations of the quality of public services. Whereas

much attention has been paid to technical reforms to improve budgeting, expenditure control, accounting, and auditing, less attention has been given to the process of developing skilled financial managers, whose expertise is key to sustained improvement in the management of public finances. Successive governments in the United Kingdom have recognized the need to strengthen professionalism in financial management, but the financial crisis gave an additional impetus for change. This change has been reflected in policy statements, changes in recruitment and human resource management practices, and the development of professional networks in accounting, audit, procurement, and project management.

*Increasing Professionalism in Public Finance Management: A Case Study of the United Kingdom* describes the journey from a civil service where generalist skills were overwhelmingly preferred toward one where professional technical skills in finance are recognized and valued. This book represents one of a number of country case studies aimed at sharing information about alternative paths and models to help developing countries seeking to strengthen public financial management skills on a long-term sustainable basis. This book will be of importance to public policy makers and public practitioners looking for ways to improve the quality of public sector management and to a range of professional finance/management bodies looking to strengthen their relevance to the government sector.

This book draws on a range of theoretical foundations, approaches and management practices that are culturally and jurisdictionally appropriate in several Muslim countries. As such, it contributes to an emerging specialism in comparative management and leadership theory that is oriented toward a broader and more diverse set of perspectives, particularly from the non-Western world, given that the importance of values, ethics, and culture have recently been recognized as a key contributing factor to management knowledge development. The author offers an in-depth overview of the Islamic management strategies that have successfully been implemented in selected Malaysian banking and non-banking financial institutions and then outlines how the application of such strategies leads to increased integrity, efficiency and performance. The book is divided into three

parts. The first part deals with the introduction, historical background and methods used in collection of data. The second part consists of a range of real-world case studies, while part three deals with the approaches to be used in the teaching of these cases followed by conclusions and recommendations. These cases studies map the strategic aspects of organizational structure and illustrate the motives that influence Malaysian managers' choices in seeking specific responses to the situations at hand, which are in harmony with the traditions in Islamic inquiry. As such, management scholars can build a foundation for conceptual and theoretical propositions relevant to Muslim culture and environment that will have practical significance. The book provides a wealth of information and enables researchers not only to identify the determinants of knowledge structure and its context but also the evolution of practice.
