Malawi is recovering from a series of shocks. Real GDP is projected to increase by 1.6 percent in 2023, with shortages of foreign exchange still weighing on economic activity. Inflation is expected to average 30.3 percent in 2023 and to start declining next year. The authorities stepped up efforts to meet fiscal targets under the PMB, adjusting expenditure to offset a

shortfall in revenue, and containing government borrowing to slow money growth. The Reserve Bank of Malawi (RBM) tightened monetary policy to contain inflationary pressures and resumed foreign exchange auctions. Rebuilding international reserves of the RBM has been slow as access to trade credit has remained limited. The authorities are seeking comparable treatment from all official bilateral creditors. The authorities continue to pursue good faith negotiations with commercial

creditors to restructure their external debt and are in arrears on commercial debt while these discussions continue.

This title was first published in 2002: This

text is concerned with the role of corporate reporting in UK public limited companies. It is a common assumption that the most significant part of any corporate report is the accounting information contained within. This book, however, takes a different view. The central argument is that the purpose of corporate reporting has changed from one primarily of stewardship and accountability to shareholders to a more

outward- and forward-looking perspective. The author argues that one of the driving forces for this change in orientation is the discourse of environmental accounting, along with other forces. The book is essentially explorative. The author is concerned with looking at different aspects of the changes in corporate reporting and taking different perspectives in the development of the argument.
