Sixteen-year-old Nate is a GEM—a Genetically Engineered Medi-tissue—created by Gathos City scientists as a cure for the elite from the fatal lung rot ravaging the population. As a child, Nate was smuggled out of the laboratory where he was held captive and taken into the Withers—a quarantined, lawless region. He manages to survive by becoming a Tinkerer, fixing broken tech in exchange for food or a safe place to sleep. When he meets Reed, a kind and fiercely protective boy who makes his heart race, and his misfit gang of scavengers, Nate finds the family he's always longed for—even if he can't risk telling them what he is. But Gathos created a genetic fail-safe in their GEMs—a flaw in their DNA that causes their health to rapidly deteriorate as they age unless they are regularly dosed with medication controlled by Gathos City. When violence erupts across the Withers, Nate's illegal supply of medicine is cut off, and a vicious attack on Reed threatens to expose his secret. With time running out, Nate is left with only two options: work for a shadowy terrorist organization that has the means to keep him alive, or stay—and die—with the boy he loves.

Are you struggling to get good prints from your images? Are your digital photos hogging your hard drive instead of hanging out in snappy albums and archives? Looking for ways to improve your prints beyond simple snapshots? The popularity and convenience of digital photography has led to more pictures being taken, but fewer being turned into beautiful prints, framed, put in photo albums, and shared with others. The majority of users do nothing with their images for two reasons: the results are disappointing and the process of improving and preparing images for print is daunting. Written by popular photographer, columnist, and digital imaging expert Jon Canfield, this book shows you how to easily enhance and prepare your digital images for printing. Step-by-step instructions and tutorials coupled with full-color images and screenshots explain how to use Photoshop CS2 or Elements for color management and correction; editing images for printing, including properly sizing, sharpening, and converting to monochrome; to fix lighting; and more. You'll also learn how to take your printing to the next level by: using different print technologies, papers, and inks; selecting Raster Image Processors; framing and mounting their prints; self-publishing; and effectively working with print services for the best output possible.

Reproducing Art Uwe Steinmueller

For many years, Maud Lewis was one of Nova Scotia's best-loved folk painters. In the 1990s she was embraced by the rest of the country when the landmark exhibition of her work *The Illuminated Life of Maud Lewis* travelled across Canada. By the time the tour was over, half a million people had become acquainted with her delightful work. Between 1938, when she married Everett Lewis, until her death in 1970, Maud Lewis lived in a tiny one-room house near Digby, Nova Scotia. Over the years, she painted the doors inside and out, the windowpanes, the walls and cupboards, the wallpaper, the little staircase to the sleeping loft,

the woodstove, the breadbox, the dustpan, almost everything her hand touched. Her house was a joy to behold, and it became a magnet for tourists as well as a focal point in her village. In 1979, after Everett Lewis died, the Maud Lewis Painted House Society worked diligently to raise funds to acquire, preserve, and display the house as part of the cultural heritage of the area as well as a memorial to their beloved artist. In 1984, the house and its contents were purchased by the Province of Nova Scotia for the Art Gallery of Nova Scotia. In *The Painted House of Maud Lewis*, Laurie Hamilton, the conservator at the Art Gallery of Nova Scotia, shows how all the different parts of the house — the building itself, the painted household items, even the wallpaper — were catalogued, conserved, and prepared for exhibition. The preliminary stages of conservation treatment began in 1996 in a most unusual location: the Sunnyside Mall in Bedford, just outside Halifax., where conservators worked in full view of the public. The conservators used established techniques and invented new ones to complete their unique project and documented every stage of the restoration photographically. The book also features more than sixty-five colour photos including several taken by noted photographer Bob Brooks in 1965 for the *Star Weekly*. Today, anyone can visit the tiny house that has become a folk art phenomenon. The restoration story spans two decades, but the story of the Painted House continues as each new visitor to the Art Gallery of Nova Scotia finds delight and inspiration in Maud Lewis's joyous vision.

Cyanotype is the most accessible and frequently used of all the alternative photographic processes. When utilized properly, it has the potential to rival other processes when it comes to detail and tonal range, but its Prussian blue color isn't always suitable for the final photograph. Throughout history, cyanotype prints have been toned not only with various—and at times hazardous—chemicals but also with more natural ingredients like tea and coffee. Since the cyanotype itself is non-toxic, Cyanotype Toning will champion an innovative process, developed by the author, of toning cyanotypes with natural material. This process, which is easy and reliable, offers a much broader range of possible colors and even beautiful black and whites. Even duotone or tricolor prints can be attained. The book consists of two parts. Part One is a step-by-step how-to section including all the information that a student at any level needs to achieve a successfully toned print. Easy-to-understand background information is provided on how and why the process works so that readers can venture on their own into the world of natural colors. The first part also has a detailed section on all the factors that can influence the outcome, like paper choice, water quality, properties of the plants, temperature of the bath and the duration of the toning. Part Two is devoted to contemporary artists who have explored toning with botanicals and integrated the process into their creative practice. The book includes: A list of equipment and supplies needed. In depth information about useful plants and the specific properties that make them suitable for toning cyanotypes. Concise step-by-step instructions for printing cyanotypes successfully. A chart of more than 60 tested papers with recommendations on paper choice. Step-by-step generic instructions on toning with botanicals. Troubleshooting toning with botanicals. More detailed recipes for specific colors with information about the plants. Step-by-step instructions on how to print duotone and tricolor prints. A range of creative ideas on how to use the process in classrooms and with different age groups. A comprehensive list of more than 380 tested parts of plants and possible color outcomes. Using botanicals to tone cyanotypes broadens the color spectrum, enlarges creative possibilities and makes the cyanotype process even more versatile. The process is not cut and dried science but a limitless field for discovery and surprises. Cyanotype Toning provides accessible information and instructions for readers at all levels. It is comprehensive and explanatory, so that readers can expand on the subject on their own, as did the contemporary artists who share their experiences and the works they have created using this innovative toning process.

(Book). Once in a while a photographer gains the trust of an artist or a band, and his work fuses with that of the artist in such a way that the two become married in the public consciousness. One can think of David Duncan's pictures of Picasso at work or Alfred Wertheimer's pictures of Elvis backstage in 1956. Elliott Landy's chronicle of The Band from 1968-1969 is of similar importance. He was trusted so deeply that this group of photographs is as intimate a portrait of a group of musicians inventing a new music as you are ever likely to come across. Today we call that music "Americana," and it is played all over the world by everyone from Mumford and Sons to the Zac Brown Band. But in 1968, when Elliott first started making these pictures, it was played by six musicians in the town of Woodstock, New York Bob Dylan and a group called The Hawks. They later changed their name to The Band. They had been The Hawks for five years when Bob Dylan pulled them out of Tony Mart's dive bar on the Jersey Shore to be his band.
