An essential introduction to a rapidly growing field of study, *The Fan Fiction Studies Reader* gathers in one place the key foundational texts of the fan studies corpus, with a focus on fan fiction. Collected here are important texts by scholars whose groundbreaking work established the field and outlined some of its enduring questions. Editors Karen Hellekson and Kristina Busse provide cogent introductions that place each piece in its historical and intellectual context, mapping the historical development of fan studies and suggesting its future trajectories. Organized into four thematic sections, the essays address fan-created works as literary artifacts; the relationship between fandom, identity, and feminism; fandom and affect; and the role of creativity and performance in fan activities. Considered as literary artifacts, fan works pose important questions about the nature of authorship, the meaning of "originality," and modes of transmission. Sociologically, fan fiction is and long has been a mostly female enterprise, from the fanzines of the 1960s to online forums today, and this fact has shaped its themes and its standing among fans. The questions of how and why people become fans, and what the difference is between liking something and being a fan of it, have also drawn considerable scholarly attention, as has the question of how fans perform their fannish identities for diverse audiences. Thanks to the overlap between fan studies and other disciplines related to popular and cultural studies—including social, digital, and transmedia studies—an increasing number of scholars are turning to fan studies to engage their students. Fan fiction is the most extensively explored aspect of fan works and fan engagement, and so studies of it can often serve as a basis for addressing other aspects of fandom. These classic essays introduce the field's key questions and some of its major figures. Those new to the field or in search of context for their own research will find this reader an invaluable resource.

[Christopher Marlowe in Context](#) John Wiley & Sons

A contemporary of William Shakespeare and Ben Jonson, Christopher Marlowe was one of the most influential early modern dramatists, whose life and mysterious death have long been the subject of critical and popular speculation. This collection sets Marlowe's plays and poems in their historical context, exploring his world and his wider cultural influence. Chapters by leading international scholars discuss both his major and lesser-known works. Divided into three sections, 'Marlowe's works', 'Marlowe's world', and 'Marlowe's reception', the book ranges from Marlowe's relationship with his own audience through to adaptations of his plays for modern cinema. Other contexts for Marlowe include history and politics, religion and science. Discussions of Marlowe's critics and Marlowe's appeal today, in performance, literature and biography, show how and why his works continue to resonate; and a comprehensive further reading list provides helpful suggestions for those who want to find out more.

Family caregiving affects millions of Americans every day, in all walks of life. At least 17.7 million individuals in the United States are caregivers of an older adult with a health or functional limitation. The nation's family caregivers provide the lion's share of long-term care for our older adult population. They are also central to older adults' access to and receipt of health care and community-based social services. Yet the need to recognize and support caregivers is among the least appreciated challenges facing the aging U.S. population. *Families Caring for an Aging America* examines the prevalence and nature of family caregiving of older adults and the available evidence on the effectiveness of programs, supports, and other interventions designed to support family caregivers. This report also assesses and recommends policies to address the needs of family caregivers and to minimize the barriers that they encounter in trying to meet the needs of older adults.

Legionnaires' disease, a pneumonia caused by the Legionella bacterium, is the leading cause of reported waterborne disease outbreaks in the United States. Legionella occur naturally in water from many different environmental sources, but grow rapidly in the warm, stagnant conditions that can be found in engineered water systems such as cooling towers, building plumbing, and hot tubs. Humans are primarily exposed to Legionella through inhalation of contaminated aerosols into the respiratory system. Legionnaires' disease can be fatal, with between 3 and 33 percent of Legionella infections leading to death, and studies show the incidence of Legionnaires' disease in the United States increased five-fold from 2000 to 2017. *Management of Legionella in Water Systems* reviews the state of science on Legionella contamination of water systems, specifically the ecology and diagnosis. This report explores the process of transmission via water systems, quantification, prevention and control, and policy and training issues that affect the incidence of Legionnaires' disease. It also analyzes existing knowledge gaps and recommends research priorities moving forward.

[Public Assistance Program and Policy Guide](#) National Academies Press Steve Coutinho explores in detail the fundamental concepts of Daoist thought as represented in three early texts: the Laozi, the Zhuangzi, and the Liezi. Readers interested in philosophy yet unfamiliar with Daoism will gain a comprehensive understanding of these works from this analysis, and readers fascinated by ancient China who also wish to grasp its philosophical foundations will appreciate the clarity and depth of Coutinho's explanations. Coutinho writes a volume for all readers, whether or not they have a background in philosophy or Chinese studies. A work of comparative philosophy, this volume also integrates the concepts and methods of contemporary philosophical discourse into a discussion of early Chinese thought. The resulting dialogue relates ancient Chinese thought to contemporary philosophical issues and uses modern Western ideas and approaches to throw new interpretive light on classical texts. Rather than function as historical curiosities, these works act as living philosophies in conversation with contemporary thought and experience. Coutinho respects the multiplicity of Daoist philosophies while also revealing a distinctive philosophical sensibility, and he provides clear explanations of these complex texts without resorting to oversimplification.

There are 2.4 billion people without improved sanitation and another 2.1 billion with inadequate sanitation (i.e. wastewater drains directly into surface waters), and despite improvements over the past decades, the unsafe management of fecal waste and wastewater continues to present a major risk to public health and the environment (UN, 2016). There is growing interest in low cost sanitation solutions which harness natural systems. However, it can be difficult for wastewater utility managers to understand under what conditions such nature-based solutions (NBS) might be applicable and how best to combine traditional infrastructure, for example an activated sludge treatment plant, with an NBS such as treatment wetlands. There is increasing scientific evidence that treatment systems with designs inspired by nature are highly efficient treatment technologies. The cost-effective design and implementation of ecosystems in wastewater treatment is something that exists and has the potential to be further promoted globally as both a sustainable and practical solution. This book serves as a compilation of technical references, case examples and guidance for applying nature-based solutions for treatment of domestic wastewater, and enables a wide variety of stakeholders to understand the design parameters, removal efficiencies, costs, co-benefits for both people and nature and trade-offs for consideration in their local context. Examples through case studies are from across the globe and provide practical insights into the variety of potentially applicable solutions.

The Copyright Office has previously highlighted the outmoded rules for the licensing of musical works and sound recordings as an area in significant need of reform. Moreover, the Office has underscored the need for a comprehensive approach to copyright review and revision generally. This is especially true in the case of music licensing the problems in the music marketplace need to be evaluated as a whole, rather than as isolated or individual concerns of particular stakeholders.
