This book describes how man-made litter, primarily plastic, has spread into the remotest parts of the oceans and covers all aspects of this pollution problem from the impacts on wildlife and human health to socio-economic and political issues. Marine litter is a prime threat to marine wildlife, habitats and food webs worldwide. The book illustrates how advanced technologies from deep-sea research, microbiology and mathematic modelling as well as classic beach litter counts by volunteers contributed to the broad awareness of marine litter as a problem of global significance. The authors summarise more than five decades of marine litter research, which receives growing attention after the recent discovery of great oceanic garbage patches and the ubiquity of microscopic plastic particles in marine organisms and habitats. In 16 chapters, authors from all over the world have created a universal view on the diverse field of marine litter pollution, the biological impacts, dedicated research activities, and the various national and international legislative efforts to combat this environmental problem. They recommend future research directions necessary for a comprehensive understanding of this environmental issue and the development of efficient management strategies. This book addresses scientists, and it provides a solid knowledge base for policy makers, NGOs, and the broader public.

The former top CEO examines the scandalous and corrupt reasons behind obscene pay packages for corporate executives—and explains how this hurts all of us--and how we can stop it. Today, the pay gap between chief executive officers of major U.S. firms and their workers is higher than ever before—depending on the method of calculation, CEOs get paid between 300 and 700 times more than the average worker. Such outsized pay is a relatively recent phenomenon, but despite all the outrage, few detractors truly understand the numerous factors that have contributed to the dizzying upward spiral in CEO compensation. Steven Clifford, a former CEO who has also served on many corporate boards, has a name for these procedures and practices— "The CEO Pay Machine." The CEO Pay Machine is Clifford's thorough and shocking explanation of the 'machine'--how it works, how its parts interact, and how every step pushes CEO pay to higher levels. As Clifford sees it, the payment structure for CEOs begins with shared delusions that reinforce one other: Once this groupthink is accepted as corporate dogma, it becomes infinitely harder to see any decision as potentially irrational or dysfunctional. Yet, as Clifford notes, the Pay Machine has caused immeasurable harm to companies, shareholders, economic growth, and democracy itself. He uses real-life examples of the top four CEOs named the highest paid in 2011 through 2014. Clifford examines how board directors and compensation committees have directly contributed to the rising salaries and bonuses of the country's richest executives; what's more, Clifford argues, each of those companies could have paid their CEOs 90 percent less and performed just as well. Witty and infuriating, The CEO Pay Machine is a thorough and incisive critique of an economic issue that affects all American workers.

This book offers the first detailed, in-depth account of how and why some Arab foreign fighters subsequently became involved in Islamist terrorism. Drawing on a personal dataset of 3,010 Arab foreign fighters compiled using biographies, martyrdom eulogies, and postings on 'jihadi' websites, Terrorist Movements and the Recruitment of Arab Foreign Fighters suggests that the subsequent involvement in Islamist terrorism by some Arab foreign fighters is primarily forged in the crucible of defensive jihad.

Decades of research have demonstrated that the parent-child dyad and the environment of the family—“which includes all primary caregivers—are at the foundation of children's well- being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United

States.

Australia is experiencing a significant demographic shift – the proportion of the population that is aged 65 years and older is increasing substantially and will continue to do so. With this shift comes particular housing challenges for older people. The Australian Dream examines the impacts of housing tenure on older Australians who are solely or primarily dependent on the age pension for their income. Drawing on 125 in-depth interviews, it compares the life circumstances of older social housing tenants, private renters and homeowners – their capacity to pay for their accommodation, how this cost impacts on their ability to lead a decent life, maintain social ties and pursue leisure activities, and how their housing situation affects their health and wellbeing. The book considers some key questions: Are older homeowners who are solely dependent on the single age pension managing financially? Are they able to maintain their homes and engage in social activity? How are older private renters who have to pay market rents faring in comparison with older homeowners and social housing tenants? What are the implications of subsidised rents and legally guaranteed security of tenure for older social housing tenants? Based on a study conducted in Sydney and regional New South Wales, this pioneering research starkly and powerfully reveals the fundamental role that affordable, adequate and secure housing plays in creating a foundation for a decent life for older Australians.

This book presents WHO guidelines for the protection of public health from risks due to a number of chemicals commonly present in indoor air. The substances considered in this review, i.e. benzene, carbon monoxide, formaldehyde, naphthalene, nitrogen dioxide, polycyclic aromatic hydrocarbons (especially benzo[alpyrene), radon, trichloroethylene and tetrachloroethylene, have indoor sources, are known in respect of their hazardousness to health and are often found indoors in concentrations of health concern. The guidelines are targeted at public health professionals involved in preventing health risks of environmental exposures, as well as specialists and authorities involved in the design and use of buildings, indoor materials and products. They provide a scientific basis for legally enforceable standards.
