Knowing the "going" royalty rate for virtually any product is as simple as reaching for the newly published *Licensing Royalty Rates, 2013 Edition*. This information-packed report details the royalty rates for over 1,500 products and services in ten lucrative licensed product categories--art, celebrity, character and entertainment, collegiate, corporate, designer, event, sports, nonprofit and music. Setting a royalty rate too high can scare away potential licensees, while accepting a lower rate can cost licensors hundreds of thousands of dollars. *Licensing Royalty*

Rates, 2013 Edition provides all the information you need to calculate the right rate every time. The data in *Licensing Royalty Rates* is compiled using information from the U.S. Patent and Trademark Office. After careful review by a blue-ribbon panel of expert licensing consultants uniquely qualified to know what the appropriate rate range is for specific properties in each licensing category, the information is organized into four time-saving sections that give researchers fast access to comprehensive statistical and analytical data: Royalty rate listing alphabetically by licensed product -- provides a detailed alphabetical listing of products and their suggested rate range across all product

categories. Royalty rate listing by international trademark class --lets you quickly identify subtle royalty rate differences between similar products within specific international trademark classes. Checklist of licensed products and services --offers a quick-reference to products with a high potential for licensing. Comprehensive list of licensed products and services --presents a detailed list of all surveyed products and services within a trademark class for preparing intent-to-use trademark applications. This detailed information gives both beginning and more experienced licensing professionals the confidence needed to negotiate the maximum allowable rate regardless of

the product, the market and the parameters of the specific deal itself.

A slow-boil, modern noir, *Of Sound Mind* finds audiometry technician Richard Keene settling into his new, center-city apartment just as he reaches his thirtieth birthday.

Formerly confined to a mental institution, Richard struggles to adapt to a world of adult freedom. He possesses abnormally acute powers of hearing and suffers from claustrophobia, yet he feels unleashed to dare fate in high places — in short, he is a bundle of neuroses. When he believes he hears a strangulation murder committed behind the closed door of a neighboring apartment in his high-rise, Richard confronts a chance for redemption that he

knew would come someday. For the incident eerily parallels the defining experience of his childhood, the night he heard — through the walls of his row house — the death struggle of the little girl next door. But just how reliable are Richard ' s perceptions?

This book examines corporate entrepreneurship start-ups in the media industries and provides a timely solution to fill in the gap of academic as well as practical knowledge in this regard. It brings together new media venturing practices in the west and east and covers new media opportunities in various emerging forms, including gaming, Internet, mobile and webcasting business. The book presents case

studies from major transnational media companies, highlights the industry specific characteristics of corporate entrepreneurship, and thus contributes to understanding the links between new business venturing and certain particular industries, so as to further explore the industry specific characteristics of entrepreneurship. This book also suggests a new approach to integrate economic and management theories for the study of media corporate entrepreneurship; while the two sets of theories are conflicting with each other, the book proposes a contingent model to reconcile different theories. This is an innovative approach and will be a valuable starting point to construct an interdisciplinary theoretical framework for

new media business studies.
