Spencer Penrose, a mining magnate, tourism developer, and philanthropist,

purchased the Turkey Creek Ranch (5EP836) near Colorado Springs, Colorado, in 1912. Penrose became a local ranching leader through his raising of purebred Holsteins and exotic sheep at Turkey Creek Ranch. He also kept wild animals, some of which became the basis for his Cheyenne Mountain Zoo. Using the services of local high-style architects MacLaren and Thomas, Penrose built an impressive Spanish Revival style residence and numerous outbuildings at the Ranch in 1912-1913. Improvements continued at the Ranch until Penrose's death in 1939. The Turkey Creek Ranch district, which has been determined eligible to be listed on the National Register of Historic Places, consists of 8 historically significant buildings and 13 other buildings

First settled in 1682 by William Penn's coterie of Welsh Quakers, the Lower Merion area has since undergone several transformations: from farmland, to the home of Philadelphia's industrial elite, to built-out suburb. Besides the development of the unique and impressive Main Line mansions for which the area is famous, Lower Merion and Narberth have been the scene of dramatic railroad rivalries and advances for the middle class. Lower Merion and Narberth focuses on the era of the most intense development, between 1900 and 1950, when the character of each individual neighborhood was coming into its own.

This book comprises chapters on research work done around the globe in the area of artificial intelligence (AI) applications in sheet metal forming. The first chapter offers an introduction to various AI techniques and sheet metal forming, while subsequent chapters describe traditional procedures/methods used in various sheet metal forming processes, and focus on the automation of those processes by means of AI techniques, such as KBS, ANN, GA, CBR, etc. Feature recognition and the manufacturability assessment of sheet metal

selecting the type and size of die components, die modeling, and predicting die life are some of the most important aspects of sheet metal work. Traditionally, these activities are highly experience-based, tedious and time consuming. In response, researchers in several countries have applied various AI techniques to automate these activities, which are covered in this book. This book will be useful for engineers working in sheet metal industries, and will serve to provide future direction to young researchers and students working in the area.
