Public Health Courier Corporation

With over 100,000 copies sold since first publication, this is one of the most popular astronomy books of all time. It is a unique guidebook to the night sky, providing all the information you need to observe a whole host of celestial objects. With a new spiral binding, this edition is even easier to use outdoors at the telescope and is the ideal beginner's book. Keeping its distinct one-object-per-spread format, this edition is also designed for Dobsonian telescopes, as well as for smaller reflectors and refractors, and covers Southern hemisphere objects in more detail. Large-format eyepiece views, positioned side-by-side, show objects exactly as they are seen through a telescope, and with improved directions, updated tables of astronomical information and an expanded night-by-night Moon section, it has never been easier to explore the night sky on your own. Small-boat Sailing Wiley

Recognizing the lack of a national standard for wilderness first aid, The Boy Scouts of America formed a Task Force consisting of wilderness medicine specialists, medical epidemiologists, legal expertise, and educators to develop

a curriculum and doctrine for a 16 hour wilderness first aid (WFA) course. Buck Tilton was the lead author of this project. As author he had to amalgamate the results of the literature research performed by the Task Force and through multiple revisions until this final product was developed. The Task Force is indebted to Buck for his hours of dedication to the project. Persons taking this course will have an appreciation of how wilderness first aid differs from standard, urban first aid. Many readers will want to learn more about this fascinating and critical skill needed by all outdoor travelers. Some will be inspired to continue their education with a wilderness first responder course. This book contains the full doctrine that the Task Force approved. It provides a portable resource for use in the field as well as a text for the WFA course. It will be your introduction to the basic skills and knowledge all wilderness travelers should possess.

#### Telerobotic Applications

These specially commissioned articles demonstrate a broad range of task complexity and this should reward the reader with insights into the difficulties routinely

encountered in remote applications. Examples are mainly taken from the nuclear industry and include remote sampling systems, tele-operated vehicle and manipulator systems, and climbing/walking robots for operation within hostile environments. These systems must negotiate impractically small openings, endure unreasonable temperatures, and withstand various forms of radiation while performing some difficult tasks. Such tasks characterize the set of challenges faced by the authors who have contributed to this book, and the solutions described demonstrate their ingenuity and determination in overcoming those challenges. An interesting overview also investigates future directions in tele-operated robotics.
