A mentor teacher shares insights, strategies and lessons for teaching reading, writing and math--and laying the foundation for learning success.
Statistics For Dummies Random House
The early years of any student s life, those first elementary school years, can be incredibly overwhelming and stressful, resulting in a slew of emotional, behavioral, and study problems that they rely on their teacher to help overcome. As a first year elementary school teacher, your role is more than just knowledgeable teacher; it is to become a mentor, a friend, and an older figure for young children to look up to. This can be overwhelming, and along with all of the other issues that face first year teachers, it can result in high turnover rates and problematic issues. This thorough, well researched book has everything first-year teachers in elementary school need to learn how to deal with including supplies, planning, parents, overcrowded classrooms, the requirements of the No Child Left Behind Act, piles of paperwork, money shortages due to budget cuts, negativity from students and other staff members, at-risk students, students who are capable but choose not to work, and special needs students. You will learn how to ask principals and administrators for help, how to memorize names quickly, how to create seating charts, how to write lesson plans, how to follow a daily routine, how to help struggling readers, how to gain respect, how to get a mentor, how to develop and implement a grading system, how to discipline students, how to create assessments, how to find free things for teachers, and how to build your confidence. And of course, as a first year teacher to students learning how to interact with the world, you will learn how to converse with them on a mature level and help them overcome stresses and problems that they may face in life at school and at home. Also, you will read about where to go for support, the reality of spending your own money on classroom supplies, mandated tests, technology solutions, and behavior management skills. We spent countless hours interviewing second year teachers, as well as veteran teachers, and have provided you with their proven techniques and strategies for surviving your first year as a teacher. This book will provide everything you need to effectively start teaching students that need a mentor, a teacher, and a friend at a young age and prepare you for your second year as you start becoming the inspiring force you always dreamed of being. A fresh take on a familiar saying, perfect for the first rainy days of spring. Rattling windows with the roar of a late-winter storm, March shows up like a lion-- wild and messy, muddy and wet. In rhythmic, exuberant text, Newbery Honor-author Marion Dane Bauer conveys the changeable nature of spring weather, as the lion makes way for the lamb—with a huge sneeze!—as the trees and flowers spring into bloom. Full of humor and motion, Caldecott-winning illustrator Emily Arnold McCully's soft watercolors bring the blustering lion and gentle lamb to life. From hail and wet snow to vibrant green fields full of blossoms, the illustrations grow brighter, springing into new life—and hinting and the summer to come. The lively text and paintings illustrate the ways in which we personify spring weather, making this book a perfect introduction to figurative language—and lots of fun to read as well.

Bullshit isn't what it used to be. Now, two science professors give us the tools to dismantle misinformation and think clearly in a world of fake news and bad data. "A modern classic . . . a straight-talking survival guide to the mean streets of a dying democracy and a global pandemic."—Wired Misinformation, disinformation, and fake news abound and it's increasingly difficult to know what's true. Our media environment has become hyperpartisan. Science is conducted by press release. Startup culture elevates bullshit to high art. We are fairly well equipped to spot the sort of old-school bullshit that is based in fancy rhetoric and weasel words, but most of us don't feel qualified to challenge the avalanche of new-school bullshit presented in the language of math, science, or statistics. In *Calling Bullshit*, Professors Carl Bergstrom and Jevin West give us a set of powerful tools to cut through the most intimidating data. You don't need a lot of technical expertise to call out problems with data. Are the numbers or results too good or too dramatic to be true? Is the claim comparing like with like? Is it confirming your personal bias? Drawing on a deep well of expertise in statistics and computational biology, Bergstrom and West exuberantly unpack examples of selection bias and muddled data visualization, distinguish between correlation and causation, and examine the susceptibility of science to modern bullshit. We have always needed people who call bullshit when necessary, whether within a circle of friends, a community of scholars, or the citizenry of a nation. Now that bullshit has evolved, we need to relearn the art of skepticism.

Investigators have moved back and forth between design efforts and basic studies in cognition to improve both application and fundamental knowledge. This volume's theme is this interaction between practice and science with the opportunity for reflecting on findings in order to understand them and suggesting improved forms of application and their underlying explanation. This is seen in various arenas including theory-based computer-assisted instruction for teaching mathematics, the design of communities of learning in elementary schools, teaching in the context of problem-solving situations and reasoning with models, self-explanation as a highly effective learning activity, conceptual change in medical training and health education, and workplace training in electronic troubleshooting. The results of extensive long-term experience and analysis in each of these areas are insightfully reported by the well-known contributors to this volume. Special features of this fifth edition include: * The work of eminent cognitive scientists in the design and evaluation of educational and training environments to increase current understanding of learning and development, as this understanding is applied to innovative instructional programs and teaching methods. * A description of learning theory and principles as well as implications and examples on research and development on educational application. * A presentation on the 10-year change in perspective on research and development in problem solving environments that invite inquiry about academic information and skills in the context of instruction of elementary school children. * An innovative approach to math and science instruction in which teaching is oriented around constructing, evaluating, and revising models. * An examination of the process of self-explaining, which involves explaining to one's self in an attempt to make sense of a new situation. * A description of a long-term program of cognitive task analysis and instructional design on problem solving in the operation of complex equipment. * An investigation on the acquisition of clinical reasoning skills and the understanding of biomedical concepts in both professional medicine and the health practices of the lay population.
