you will want to use (web browser, email client, office applications, photo software, media player, etc). It is a practical step-by-step guide rather than an academic description of the Bodhi system, but at relevant points it will give links to explanatory material on the web. It grew out of notes prepared for a University of the Third	Age (U3A) computer group in the UK, some of whose members wished to migrate to Linux from Windows following Microsoft's decision to cease supporting Windows XP. I hope, though, that it will prove useful to a wider audience, including existing Linux users who are coming to Bodhi for the first time. Bodhi Linux is highly	customizable and can be tweaked in numerous ways. However, a step-by-step guide such as this is necessarily prescriptive, so that by following it you end up with a very specific desktop profile. Don't worry about that. The point is that having learnt how to create and save that profile, you are then in a position to set up your own profile,
---	--	--

---

either by playing around with what you've already produced or by starting afresh. And if you mess things up you can easily restore your saved profile. And as for the various applications that you will be installing as you work through this guide, they can be easily removed and replaced with alternatives. I should emphasize that this is not an

official Bodhi Linux publication, and that I have no connection of any kind with the Bodhi Linux developers. Like Bodhi itself (and indeed most Linux products), it is given away free of charge. However, if you find it helpful and, more importantly, if you like Bodhi and continue to use it, I would encourage you to make a

Bodhi Linux to support its further development. The donate link is on the Bodhi Linux home page at [www.bodhilinux.com](http://www.bodhilinux.com).
