Stance and voice are among the most significant concepts in writing theory and pedagogy today. Referring to the ways we express a point of view and engage with

others, the terms are particularly controversial in the domain of academic writing, long considered a faceless and impersonal kind of discourse. But while corpus research shows that stance is scarcer in academic genres than in many other contexts, the complex, and distinctive ways scholars and students present their attitudes to their texts, their readers and their content offers a rich area of study for discourse analysts and students of academic writing. This book reappraises the notions of stance and voice and reconsiders their relevance in applied linguistics, showing their expression and impact in a broad range of written academic genres. In its fifteen chapters, leading authorities offer their thoughts and research on the following issues: • The key frameworks, methods, theories and areas of research • The expression of stance and voice in a range of genres and disciplines • The centrality of community and context in the expression of stance and voice • The main factors of variation: channel, discipline, culture and time • Questions of authenticity, distinctiveness, empowerment and identity

Many business executives are increasingly becoming workaholic human-doings, longing to be full and integrated human-beings. They aspire to live with integrity, where their thoughts, values, words and deeds are in harmony. The problem is that they don't know how to do so in a business world that is increasingly characterised by complexity, turbulence and greed. Leading with Wisdom provides food for thought for people dealing with these

challenges. It contains stories and reflections of 31 inspiring and compassionate business leaders who care about what is truly important in life and who integrate this awareness and sensitivity into their leadership. Leaders who search for meaning, purpose and fulfilment both in the external world of business and in the internal world of consciousness and conscience. Leaders whose leadership is a natural expression of their hearts, minds and souls. In other words, leaders who lead from a spiritual basis. Such perspectives on leadership are not yet mainstream. Greed, prestige and power appear to still be prime motivating forces for leaders of the world's larger corporations. In spite of 25 years of globalisation, poverty is still devastatingly ubiquitous in many parts of the world. In striking contrast, the compensation packages of top leaders in business, particularly in the West, have skyrocketed, reaching levels that would have been considered impossible only a decade ago. What is clearly needed is a change in the mind-set,

values and principles of our leaders, as well as of those who finance our enterprises, and of those who teach and mentor our future leaders. At the very minimum, what is needed is an expansion of the concept of 'success' so that it transcends the prevailing myopic focus on short-term financial gains. It can be argued that this rampant greed is gradually being tamed, not just by laws, but also by social and ethical norms. In the last two decades there has been an amazing and uplifting focus on such perspectives as business ethics, corporate social responsibility and sustainability. But when leaders are questioned as to why they and their organisations should promote this new and expanded sensitivity to corporate responsibility, their 'default' answer typically is that it is profitable – an efficacious means to promote classical business ends of increasing earnings and share prices. But how and why should such an expanded concept of leadership develop? What should provide the motivation for our leaders to find their way in an increasingly complex business world by using a compass that points not only to a pot of gold, but also to a path to deeper meaning and purpose in business? This book does not provide answers in the form of proposals as to new rules or laws or moral injunctions. Rather it provides a collage of perspectives in the form of stories of highly respected and successful executives who have integrated their spiritual search into their leadership so as to be "whole" people – leaders whose thoughts, words and deeds are in harmony with their most fundamental truths and longings, both at work and in their private lives. These stories tell of an emerging culture where business becomes a primary domain for both individual and organisational spiritual growth. *Leading with Wisdom: Spiritual-Based Leadership in Business* portrays an emerging global culture. This groundbreaking book offers the experiences and perspectives of 31 top executives from 15 countries in 6 continents. It is based on extensive personal interviews. These are business people who express from first-hand experience what it is like to lead a business from a spiritual basis. They tell amazing, down-to-earth, real-life stories about how spirituality and rationality can go hand in hand in leadership and life. Their words of wisdom demonstrate that executives who lead from a spiritual basis can achieve success, recognition, peace of mind and happiness, while at the same time serving the needs of all those affected by their leadership. Written in an engaging style, where the special "voice" of each leader is heard, this book will be profoundly valuable to business leaders at every level and for all people who want to lead with integrity from a spiritual basis.

The book discusses the significance of the education loan as a tool for financing the higher education of students of all backgrounds in developing countries with special reference to India. The academic cost of providing greater access to higher education with emphasis on quality is disproportionately high in several

developing countries and, as such, there is a need to raise more resources to meet the different components of costs of higher education such as academic costs, academic support cost and student welfare costs. There is also an emerging need for raising resources from non-government sources to fund higher education. The education loan within an appropriate framework of inclusiveness is a significant non-government source of finance. The book deals with different models of education loan systems prevailing in various countries and covers Indian experiences in the area of education loans, as a case study of a developing country. Based on field studies conducted in four Indian states, the book explains that the higher education loan system in India has not been inclusive of poorer sections of society, particularly people from rural areas. The book also includes an elaborate discussion on the operation of education loans given by banks in four Indian states and examines various issues of the education loan system and formulates an action plan to popularize it as a tool for financing higher education in developing countries. The book will interest scholars and practitioners in the areas of education,

banking and finance generally, and development economics in particular.

Sustainable Bioprocessing for a Clean and Green Environment: Concepts and Applications highlights the importance of waste to health in which waste is safely converted to value-added products via bioprocess technologies. Providing fundamental concepts and applications, this book also offers readers the methodology behind the operation of a variety of biological processes used in developing valuable products from waste. Features: Discusses synthesis and use of environmentally friendly biobased materials, such as biopolymer films and biobased plasticizers Highlights nanotechnology applications in the treatment of pollution and emphasizes the synthesis of biogenic nanomaterials for environmental remediation Describes the use of biosurfactants and emerging algal technologies, such as applications of microalgae in nutraceuticals and biofuel production Details delignification for lignocellulosic biomass This interdisciplinary book offers researchers

and practitioners in chemical engineering, environmental engineering, and related fields a broad perspective on fundamentals, technologies, and environmental applications of sustainable bioprocessing.

The book is written per the syllabus of first year engineering degree course for various universities. It covers basic topics of electrical, electronics and communication engineering. It also includes worked out examples, University examination questions and answers, exercise, etc in every chapter. This book is suitable for course in basic electrical and electronics engineering under various Universities. Authors have tried to elucidate the topics in such a way that even a mediocre student can assimilate them. Many solved problems, sample question papers and exercise given in every section will provide a thorough understanding of the topics. Other features include attractive writing style, well structured equations and numerical examples, pictures of high clarity, etc. This book is one among prescribed textbooks for the syllabus of BIT, Mesra, Ranchi.

This book presents select proceedings of the International Conference on Renewable

Energy Systems (ICRES 2020). It focuses mainly on the concepts of electric vehicle, selection of batteries, selection of electric motors for specific capacity vehicles, design of controllers, battery chargers and development of testing facility. It presents the importance of energy storage system and modeling aspects of battery, super capacitor, flywheel energy storage and Superconducting magnetic energy storage systems. The book comprehensively presents the integration of renewable energy sources with smart grid, smart grid technologies and equipment, grid interconnection issues and design of intelligent controllers for grid connected system. The state-of-the-art technologies such as charging infrastructure for electric vehicles, robotic applications in energy, energy education and informatics are also covered in this book. This book will benefit the students and researchers in the field of electronics and electrical engineering, energy engineering, automotive engineering, e-mobility specialists and industrial experts.
