The book provides an overview of more than a decade of joint R&D efforts in the Low Countries on HLT for Dutch. It not only presents the state of the art of HLT for Dutch in the areas covered, but, even more importantly, a description of the resources (data and tools) for Dutch that have been created are now available for both academia and industry worldwide. The contributions cover many areas of human language technology (for Dutch): corpus collection (including IPR issues) and building (in particular one corpus aiming at a collection of 500M word tokens), lexicology, anaphora resolution, a semantic network, parsing technology, speech recognition, machine translation, text (summaries) generation, web mining, information extraction, and text to speech to name the most important ones. The book also shows how a medium-sized language community (spanning two territories) can create a digital language infrastructure (resources, tools, etc.) as a basis for subsequent R&D. At the same time, it bundles contributions of almost all the HLT research groups in Flanders and the Netherlands, hence offers a view of their recent research activities. Targeted readers are mainly researchers in human language technology, in particular those focusing on Dutch. It concerns researchers active in larger networks such as the CLARIN, META-NET, FLaReNet and participating

in conferences such as ACL, EACL, NAACL, COLING, RANLP, CICling, LREC, CLIN and DIR ( both in the Low Countries), InterSpeech, ASRU, ICASSP, ISCA, EUSIPCO, CLEF, TREC, etc. In addition, some chapters are interesting for human language technology policy makers and even for science policy makers in general.

Researchers in special education have been developing a knowledge base of evidence-based practices that improve the outcomes of students with disabilities. Unfortunately, filtering that knowledge into classrooms implemented by special education teachers has been a challenge. In *The Essentials of Special Education Research*, Andrew M. Markelz and Benjamin S. Riden directly address the persistent research-to-practice gap by systematically presenting the essential components of research that every special education teacher must know. The first section investigates the foundations of research and why special education teachers should regularly read research articles. It also examines the basic structure of research articles to demystify jargon and provide teachers confidence when reading scientific literature. The second section explores various research methodologies that consumers of research must know. Methodologies such as literature reviews, single-case design, quantitative, qualitative, and others are unpacked so that special education teachers know the critical components of these methodologies, along with their limitations, to become critical consumers of research. The third section focuses on putting this knowledge into practice. Using practical scenarios, the authors demonstrate how a special education teacher can combat common classroom problems by locating and reading relevant research to gain information and implement best practices based on scientific evidence. This step-by-step guide combines the knowledge and skills outlined in this book to truly become a scientific practitioner.

The Christian faith is based on historical truths that, if properly understood, can be defended as truth and not wishful thinking. In a day and age where it is said that truth does not exist, or that truth is whatever people believe it is, Christians must stand up and present the truth of Jesus Christ in a loving and clear way. We are to be prepared at all times to defend our faith, why we believe that Jesus is the Christ, the Son of God. This book lays out the traditional arguments for the existence of God, proves that there must be only one God for anything to exist that does exist, and then it demonstrates that the only God is Jesus Christ. Moreover, the Bible is shown to be reliable and believable, for it is the logical avenue through which God, if He exists, would communicate with His people.

Specially written for an American audience, this accessible encyclopedic survey covers politics in every individual European nation and in the European Union. The two-volume Europe, A Political Profile: An American Companion to European Politics is the first encyclopedic survey of politics in Europe especially written for a wide American public, including high school students. The first volume places national developments and institutions in a Europe-wide context and includes tables comparing European politics with U.S. politics. The second volume discusses the individual European nations by regional group, facilitating comparison of a country with neighboring nations. All European countries are covered, including Turkey, Russia, and the Caucasian republics of Georgia, Armenia, and Azerbaijan. Each country profile includes an introduction to the land, the people, the economy, and the culture, as well as a timeline of historic highlights. The nation's political system is discussed, as are public policies and the major political parties. Each entry also provides tables listing heads of state, the composition of the legislative body, and the political leaders.

The News Media in Puerto Rico offers a synopsis as well as a critical analysis of the Island's news media system, with emphasis on the political and economic factors that most influence how the media operate. The authors also document the impact of Hurricane Maria on the media structures and the changing media landscape given the political, economic and colonial strictures. Building on interviews with news media professionals, the book further presents detailed insights about journalism and journalism education in these times of crises. The final chapters include theoretical frameworks and methodological guidelines for the analysis of other colonial, post-colonial and neo-colonial media systems, with research recommendations valuable for future studies of the Island's media as well as for cross-national comparisons. This book will be an essential read for students and scholars interested in learning not only about the Puerto Rican and Latin American mass media, but also the media systems of other colonial/neo-colonial countries.

"The Internet has enabled new forms of large-scale collaboration. Voluntary contributions by large numbers of users and co-producers lead to new forms of production and innovation, as seen in Wikipedia, open source software development, in social networks or on user-generated content platforms as well as in many firm-driven Web 2.0 services. Large-scale collaboration on the Internet is an intriguing phenomenon for scholarly debate because it challenges well established insights into the governance of economic action, the sources of innovation, the possibilities of collective action and the social, legal and technical preconditions for successful collaboration. Although contributions to the debate from various disciplines and fine-grained empirical studies already exist, there still is a lack of an interdisciplinary approach"--Publisher's description.

The Jungle Book Walter de Gruyter GmbH & Co KG

1990 was a year of severe turmoil in social history of India. The acceptance of reservations in services for socially and educationally backward classes created protests and a number of young students lost their lives. After a protracted case hearing, in 1992, the Supreme Court severely castigated the Hindu social structure for its lack of egalitarian ethos, four watertight compartments of four Varnas and a fifth of outcastes or Panchama. It blamed it for centuries of discrimination against other backward classes in which the victims were condemned to follow their hereditary occupations. It rejected the notion of equality and said there could be no equality between the unequal. Although much of the literature to contradict the above colonial times versions of Hindu social structure appeared later, there was enough literature to show even in 1992 that Varnas were not four watertight compartments; the theory of caste occupation nexus did not have universal support; and for ages there had been nothing lower than once born Shudra. This book is an effort to answer, what constituted the Hindu social structure; what were its essences and what aberrations and constructs, and how the law got misapplied in post-independence India.

This updated edition of Teaching Global History challenges prospective and beginning social studies teachers to formulate their own views about what is important to know in global history and why. This essential text explains how to organize curriculum around broad social studies concepts and themes, as well as student questions about humanity, history, and the contemporary world. All chapters feature lesson ideas, a sample lesson plan with activity sheets, primary source documents, and helpful charts, graphs, photographs, and maps. This new edition includes connections to the C3 framework, updates throughout to account for the many shifts in global politics, and a new chapter connecting past to present through current events and historical studies in ways that engage students and propel civic activism. Offering an alternative to pre-packaged textbook outlines and materials, this text is a powerful resource for promoting thoughtful reflection and debate on what the global history curriculum should be and how to teach it.

Based on his extensive experience in international librarianship, Peter Johan Lor, South Africa's first National Librarian and a former Secretary General of the IFLA, has written the first comprehensive and systematic overview of international and comparative librarianship. His book provides a conceptual framework and methodological guidelines for the field and covers the full range of international relations among libraries and information services, with particular attention to the international political economy of information, the international diffusion of innovations and policy in library and information services, LIS development and international aid. It concludes with a discussion of the practical relevance and future of international and comparative studies in LIS. This book details the design and technology of the on-line electric vehicle (OLEV) system and its enabling wireless power-transfer technology, the “ shaped magnetic field in resonance ” (SMFIR). The text shows how OLEV systems can achieve their three linked important goals: reduction of CO2 produced by ground transportation; improved energy efficiency of ground transportation; and contribution to the amelioration or prevention of climate change and global warming. SMFIR provides power to the OLEV by wireless transmission from underground cables using an alternating magnetic field and the reader learns how this is done. This cable network will in future be part of any local smart grid for energy supply and use thereby exploiting a local and renewable energy generation to further its aims. In addition to the technical details involved with design and realization of a fleet of vehicles combined with extensive subsurface charging infrastructure, practical issues such as those involved with pedestrian safety are considered. Furthermore, the benefits of reductions in harmful emissions without recourse to large banks of batteries are made apparent. Importantly, the use of Professor Suh ’ s axiomatic design paradigm enables such a complicated transportation system to be developed at reasonable cost and delivered on time. The book covers both the detailed design and the relevant systems-engineering knowledge and draws on experience gained in the successful implementation of OLEV systems in four Korean cities. The introduction to axiomatic design and the in-depth discussion of system and technology development provided by The On-line Electric Vehicle is instructive to graduate students in electrical, mechanical and transportation engineering and will help engineers and designers to master the efficient, timely and to-cost implementation of large-scale networked systems. Managers responsible for the running of large transportation infrastructure projects and concerned with technology management more generally will also find much to interest them in this book.

With the Common Core State Standards emphasizing listening and speaking across the curriculum, these long-neglected language arts are regaining a place in schools. For teachers, this means reexamining practices and rethinking expectations. How much do we know about teaching listening and speaking as the complex communication skills they are? How do we teach students to discuss appropriately, integrate and understand the mountains of information they receive, and express themselves clearly and effectively? In this lively and practical book, 20-year

teaching veteran Erik Palmer presents an approach aligned to the six Common Core anchor standards for speaking and listening but focused on preparing students for 21st century communication inside and beyond the classroom. Here, you'll get concrete guidance for teaching and assessing \* Collaborative discussion \* Listening and media literacy \* Questioning and reasoning \* Speech presentation \* Effective multimedia use \* Adapting speech to different content and tasks With due respect to reading and writing, we do most of our communicating—in the classroom and in life—through listening and speaking. Filled with examples and specific activities targeted to variety of subjects and grade levels, this book is an essential resource for all teachers interested in helping students acquire core skills that cross the content areas and support long-term success.

For more than a century, Bible scholars and university researchers have been systematically debunking what ordinary Christians believed about Jesus of Nazareth. But what if the most recent Biblical scholarship actually affirmed the New Testament? What if Jesus was not a Zealot revolutionary, or a Greek Cynic philosopher, or a proto-feminist Gnostic, but precisely what he claimed to be: the divine Son of Man prophesied in the Book of Daniel who gave his life as a ransom for many? What if everything the Gospels say about Jesus of Nazareth—his words, his deeds, his plans—turned out to be true? Searching for Jesus changes “ what if? ” to “ what is, ” debunking the debunkers and showing how the latest scholarship supports orthodox Christian belief.

In his book 21 Lessons for the 21st Century the historian Yuval Noah Harari wrote that man had the possibility to conquer the world precisely because he could create fictional stories and believe in them. People created more and more complex stories about themselves that served and continue to serve, according to the professor of the University of Jerusalem, building unity, social harmony and gaining power. A narrative about past, in which memory fragmentation and victimisation play a large role, may be a temptation to instrumentalise the past. This is especially true in relation to the events of the twentieth century, when a series of bloody war conflicts occurred. As shown in the following post-conference volume, today the wars of the past (World War I and World War II, Indian-Pakistani war) and current conflicts (Russo-Ukrainian war, war in Sudan or Nagorno-Karabakh) are also a catalyst for the process of instrumentalisation. This process can be analysed both at the level of the evolution of the language of conflict, including the erosion of the values of democratic dialogue, and the use of specific means of commemorating the past (monuments, museums, the Internet).
