The Rough Guide to California ABC-CLIO Inventory and monitoring of coastal aquaculture and fisheries structures provide important baseline data for decision-making in planning and development, including regulatory laws, environmental protection and revenue collection. Mapping these structures can be performed with good accuracy and at regular intervals by satellite remote sensing, which allows observation of vast areas, often of difficult accessibility, at a fraction of cost of traditional surveys. This study is based on interpretation of satellite imaging radar data and a detailed image analysis procedure is described. The report aims at the necessary

technology transfer for and operational use of the approach indicated in other similar environments. United States Official Postal Guide Lulu Press, Inc

by Dr P .H. Greenwood British Museum (Natural History), London Dr Tesch's wide ranging account of anguillid eels impinges on the interests of many biologists; it is not simply a specialized tome narrowly aimed at ichthyologists and fishery scientists, rather it provides a source of primary reference and a

comprehensive summary of information that is not likely to be superseded for a long time. It is significant that the bibliography includes references to learned journals concerned with physiology, pharmacology, taxonomy, genetics, zoology, endocrinology, botany, ecology and environmental interactions. Such is the breadth of interest in the Anguillidae. Few fish species have been subjected to as detailed a review as Dr. Tesch gives for the (two) Atlantic species of *Anguilla*. An equally comprehensive resume of research into the fourteen, rather less well-studied Indo-Pacific species gives balance and reciprocal illumination to several biological problems posed by these similar but quite distinctive species.
