People tend to think of creativity and strategy as opposites. This book argues that they are far more similar than we might expect. More than this, actively aligning creative and strategic thinking in any enterprise can enable more effective innovation,

entrepreneurship, leadership and organizing for the future. By considering strategy as a creative process (and vice versa), the authors define 'creative strategy' as a mindset which switches between opposing processes and characteristics, and which drives every aspect of the business. The authors draw experiences and cases from across this false divide – from the music industry, sports, fashion, Shakespearean theatre companies, creative and media organizations and dance, as well as what we might regard as more mundane providers of mainstream products and services – to uncover the creative connections behind successful strategy.

“Creative Strategy is a talisman for those looking to take a new path” Matt Hardisty, Strategy Director, Mother Advertising “It has been said that business is a hybrid of dancing and calculation – the former incorporating the creative within a firm, the latter the strategic. Bilton and Cummings show how these apparently contradictory processes can be integrated. Their insights about how firms can ‘create to strategize’ and ‘strategize to create’ are informative for managers and management scholars alike.” Jay Barney, Professor and Chase Chair of Strategic Management, Fisher College of Business, The Ohio State University “In today’s world, new thinking – creativity – is required to tackle long-standing problems or address new opportunities. The trouble is few organizations understand how to foster and apply creativity, at least in any consistent manner. This book provides new insights into just how that can be done. It moves creativity from being just the occasional, and fortuitous, flash of inspiration, to being an embedded feature of the way the organization is run.” Sir George Cox, Author of the Cox Review of Creativity in Business for HM Govt., Past Chair of the Design Council

Remodelista.com is the go-to, undisputed authority for home design enthusiasts, remodelers, architects, and designers. Unlike sites that cater to all tastes, Remodelista has a singular and clearly defined aesthetic: classic pieces trump designs that are trendy and transient, and well-edited spaces take precedence over cluttered environments. High and low mix seamlessly here, and getting the look need not be expensive (think Design Within Reach meets Ikea). Remodelista decodes the secrets to achieving this aesthetic, with in-depth tours and lessons from 12 enviable homes; a recipe-like breakdown of the

hardest-working kitchens and baths; dozens of do-it-yourself projects; "The Remodelista 100," a guide to the best everyday household objects; and an in-depth look at the ins and outs of the remodeling process. In a world of design confusion, Remodelista takes the guesswork out of the process.

Every day we interact with thousands of consumer products. We not only expect them to perform their functions safely, reliably, and efficiently, but also to do it so seamlessly that we don't even think about it. However, with the many factors involved in consumer product design, from the application of human factors and

ergonomics principles to reducing risks of malfunction and the total life cycle cost, well, the process just seems to get more complex. Edited by well-known and well-respected experts, the two volumes of Handbook of Human Factors and Ergonomics in Consumer Product Design simplify this process. The first volume, Human Factors and Ergonomics in Consumer Product Design: Methods and Techniques, outlines the how to incorporate Human Factors and Ergonomics (HF/E) principles and knowledge into the design of consumer products in a variety of applications. It discusses the user-centered design process, starting with how mental workload affects every day interactions with consumer products and what lessons may be applied to product design. The book then highlights the ever-increasing role of information technology, including digital imaging, video and other media, and virtual reality applications in consumer product design. It also explores user-centered aspect of consumer

product development with discussions of user-centered vs. task-based approach, articulation and assessment of user requirements and needs, interaction with design models, and eco design.
