There is no scientist in the world like Dr. Bill Bass. A pioneer in forensic anthropology, Bass created the world's first laboratory dedicated to the study of human decomposition—three acres of land on a hillside in Tennessee where human bodies are left to the elements. His research at "the Body Farm" has revolutionized forensic science, helping police crack cold cases and pinpoint time of death. But during a forensics career that spans half a century, Bass and his work have ranged far beyond the gates of the Body Farm. In this riveting book, the bone sleuth explores the rise of modern forensic science, using fascinating cases from his career to take readers into the real world of

C.S.I. Some of Bill Bass's cases rely on the simplest of tools and techniques, such as reassembling—from battered torsos and a stack of severed limbs—eleven people hurled skyward by an explosion at an illegal fireworks factory. Other cases hinge on sophisticated techniques Bass could not have imagined when he began his career: harnessing scanning electron microscopy to detect trace elements in knife wounds; and extracting DNA from a long-buried corpse, only to find that the female murder victim may have been mistakenly identified a quarter-century before. In *Beyond the Body Farm*, readers will follow Bass as he explores the depths of an East Tennessee lake with a twenty-first-century sonar system, in a quest for an airplane that disappeared with two people on board thirty-five years ago; see Bass exhume fifties pop star "the Big Bopper" to determine what injuries he suffered in the plane crash that killed three rock and roll legends on "the day the music died"; and join Bass as he works to decipher an ancient Persian death scene nearly three thousand years old. Witty and engaging, Bass dissects the methods used by homicide investigators every day, leading readers on an extraordinary journey into the high-tech science that it takes to crack a case.

Beyond the Body Farm Harper Collins

The first three Body Farm novels—*Carved in Bone*, *Flesh and Bone*, and *The Devil's Bones*—took readers deep into the backwoods of East Tennessee, where fascinating forensic science mixed with extraordinary characters, including the Farm's charismatic founder. Now, in the latest installment of the New York Times bestselling series Kathy Reichs calls "the real deal," truth, lies, war, and history intertwine in a story that reaches new heights of suspense. This is Jefferson Bass's most ambitious and enthralling book yet. *Bones of Betrayal* Dr. Bill Brockton is in the middle of a nuclear-terrorism disaster drill when he receives an urgent call from the nearby town of Oak Ridge—better known as Atomic City, home of the Bomb, and the key site for the Manhattan Project during World War II. Although more than sixty years have passed, could repercussions from that dangerous time still be felt today? With his graduate assistant Miranda Lovelady, Brockton hastens to the death scene, where they find a body frozen facedown in a swimming pool behind a historic, crumbling hotel. The forensic detectives identify the victim as Dr. Leonard Novak, a renowned physicist and designer of a plutonium reactor integral to the Manhattan Project. They also discover that he didn't drown: he died from a searing dose of radioactivity. As that same peril threatens the medical examiner and even Miranda, Brockton enlists the help of a beautiful, enigmatic librarian to peel back the layers of Novak's life to the secret at its core. The physicist's house and personal life yield few clues beyond a faded roll of undeveloped film, but everything changes when Brockton chances upon Novak's ninety-year-old ex-wife, Beatrice. Charming and utterly unreliable, she takes him on a trip back into Oak Ridge's wartime past, deep into the shadows of the nuclear race where things were not quite as they seemed. As Beatrice drifts between lucidity and dementia, Brockton wonders if her stories are fact or fancy, history or myth. But he knows one thing—that she holds the key to a mystery that is becoming increasingly labyrinthine. For as the radiation count steadily rises, and the race to find the truth intensifies, the old woman's tales hint at something far darker and more complex than the forensic anthropologist himself could have ever imagined.

Carved in Bone Body Farm

A burned car sits on a Tennessee hilltop, a woman's lifeless, charred body seated inside. Forensic anthropologist Bill Brockton's job is to discover the truth hidden in the fire-desecrated corpse. Was the woman's death accidental . . . or was she incinerated to cover up her murder? But his research into the effect of flame on flesh and bone is about to collide with reality like a lit match meeting spilled gasoline. The arrival of a mysterious package—a set of suspiciously unnatural cremated remains—is pulling Brockton toward a nightmare too inhuman to imagine. And an old nemesis is waiting in the shadows to put him to the ultimate test, one that could reduce Brockton's life to smoldering ruins.

Teasing Secrets from the Dead St. Martin's Press

Janet Kauffman, one of our finest writers, has earned a reputation for the magic of her language as well as for her ability to grasp and relate the unexplored depths of women's experience. *The Body in Four Parts* is a nonlinear passion play, an eloquent demand for a return to the roots of our being, our most ancient and elemental nature - air, earth, fire, water. This novel embraces a new vision of nature and an all-encompassing, unlimited wildness. In her multiplicity, Kauffman's central character embodies a radical redefinition of human

nature: . "I can say this about myself, and it could be said across the board: she is piece-meal, she is not herself, she's number-less, not numb, she cannot be counted out, she's gusted air, open fire, she is not watered down, she's dirt and debris. Also, she is a hank of hair, hacked. The Body in Four Parts is a strange and dizzying novel about the nature of human nature, about the physicality of language, about women reclaiming their various erotic, environmental, feminist, and political selves.

Flesh and Bone Crown

Winner of the Crime Writers' Association ALCS Gold Dagger for Nonfiction— A tour through the human skeleton and the secrets our bones reveal, from the author of All That Remains In her memoir All That Remains, internationally renowned forensic anthropologist and human anatomist Dame Sue Black recounted her life lived eye to eye with the Grim Reaper. During the course of it, she offered a primer on the basics of identifying human remains, plenty of insights into the fascinating processes of death, and a sober, compassionate understanding of its inescapable presence in our existence, all leavened with her wicked sense of humor. In her new book, Sue Black builds on the first, taking us on a guided tour of the human skeleton and explaining how each person's life history is revealed in their bones, which she calls "the last sentinels of our mortal life to bear witness to the way we lived it." Her narrative follows the skeleton from the top of the skull to the small bones in the foot. Each step of the journey includes an explanation of the biology—how the bone is formed in a person's development, how it changes as we age, the secrets it may hold—and is illustrated with anecdotes from the author's career helping solve crimes and identifying human remains, whether recent or historical. Written in Bone is full of entertaining stories that read like scenes from a true-life CSI drama, infused with humor and no-nonsense practicality about the realities of corpses and death.

For every new surgical procedure, from heart transplants to gender confirmation surgery, cadavers have helped make history in their quiet way.
