A series of tables and charts is presented from which the atmospheric transmittance between any two points in the terrestrial atmosphere can be determined. This material is based on a set of five atmospheric models ranging from tropical to arctic and two aerosol models. A selected set of laser frequencies has been defined for which monochromatic transmittance values have been given. For low resolution transmittance prediction, a series of charts has been drawn providing the capability for predicting transmittance at a resolution of 20 wave-numbers. Separate sections are included on scattered solar radiation, infrared emission, refractive effects, and attenuation by cloud and fog. This third edition differs from the others in that the low resolution spectral curves for the uniformly mixed gases and in the short wavelength region for water vapor have been revised, providing some overall improvement in accuracy; and more importantly, an appendix has been added providing model data and equivalent sea level path data for the U.S. Standard Atmosphere, 1962.

Please note: This ebook edition does not include the photo insert from the print edition. The widely anticipated memoir of legendary ace American fighter pilot, Robin Olds Robin Olds was a larger-than-life hero with a towering personality. A graduate of West Point and an inductee in the National College Football Hall of Fame for his All-American performance for Army, Olds was one of the toughest college football players at the time. In WWII, Olds quickly became a top fighter pilot and squadron commander by the age of 22—and an ace with 12 aerial victories. But it was in Vietnam where the man became a legend. He arrived in 1966 to find a dejected group of pilots and motivated them by placing himself on the flight schedule under officers junior to himself, then challenging them to train him properly because he would soon be leading them. Proving he wasn't a WWII retread, he led the wing with aggressiveness, scoring another four confirmed kills, becoming a rare triple ace. Olds (who retired a brigadier general and died in 2007) was a unique individual whose personal story is one of the most eagerly anticipated military books of the year.

This book is an attempt to present under one cover the current state of knowledge concerning the potential lightning effects on aircraft and that means that are available to designers and operators to protect against these effects. The impetus for writing this book springs from two sources- the increased use of nonmetallic materials in the structure of aircraft and the constant trend toward using electronic equipment to handle flight-critical control and navigation function.

Lightning Protection of Aircraft
Imagine working all day in 100-degree plus temperatures under constant life-threatening circumstances, sometimes relying only on the negligible amount of hydration from a cactus you've dug up. This is the life of a U.S. Army soldier in places like Iraq, Afghanistan, and elsewhere, which is why the U.S. Army Desert Operations Handbook is a vital reference for survival in one of the harshest environments in the world.

This official guide covers how to plan and conduct operations, how the environment affects personnel and equipment, and most importantly, how to survive and receive supplies in the desert. The obvious problems with extreme temperatures are water location and mobility. However, from handling and caring for firearms to operating and fueling a tank, the entire game changes in the dry, sandy desert conditions. The skills in this guide are taken from lessons learned in real combat situations. Success in desert operations requires the ability to adapt with constant terrain and temperature changes, which are often drastic within the same twenty-four-hour period. All the while, the soldier must be able to move within a unit without being visible to unfriendly groups. This combat-

tested manual is sure to arm anyone with the skills necessary to survive in the desert.

This official aviation publication presents suggestions and safety-related recommendations to assist amateur and ultralight builders in developing individualized aircraft flight test plans.
