Two experienced HR communications consultants show how to dramatically improve the effectiveness of every HR message. HR professionals know their programs are pivotal to organizational success, but they also know how difficult it is to communicate those programs effectively. Hampered by legal restrictions, highly complex policies and programs, corporate politics, and old-fashioned notions about business communication, they create communications their audiences simply ignore. It needn ' t be that way! Alison Davis and Jane Shannon present simple, powerful principles and techniques every HR professional can use, even those who ' ve never been comfortable as writers. Davis and Shannon demonstrate how to treat employees as customers, and use the same strategies, tools, and care your company uses to sell its products or services. The authors help HR professionals understand their customers ' (and executives ') needs and motivations more clearly; package information to promote faster, better decision-making; and measure their effectiveness. They present specific solutions for safely eliminating unnecessary detail and jargon; explaining benefits, pay, and policies; improving recruiting, orientation, and outplacement communications; supporting retirement planning; and improving performance management.

This book is provided as a guide, encouragement and handbook for faculty to introduce digital media in language you can understand and provide strategies and activities you can quickly assimilate into your teaching. We are excited that more people will be able to benefit from the powerful help and guidance contained in this book. We are even more exhilarated as we anticipate how each of you will discover applications and new directions we would never anticipate, and look forward. We look forward to your innovations as you use the material you discover here. This book responds to the needs of our changing world and students by revealing innovative technology applications and how faculty are and can use digital media in teaching in higher education because faculty make the

quickest changes and learn how to do it best. It is a valuable resource for faculty from faculty, because it allows the sharing of successful teaching experiences with digital media with our worldwide colleagues so they may modify it, extend it, and improve it. Moreover, in our work with faculty across all disciplines, we also find that many struggle to think about teaching in ways in which they can incorporate technology meaningfully. While we might be experts in our discipline (chemistry, philosophy, music, etc) due to the curriculum of terminal degrees, we might not have strong preparation in instructional design. We have been fortunate to bring together faculty experts across different disciplines to specifically speak about how and why to use digital media in higher education settings. We realize we are asking you to think about your way of teaching with new ideas and strategies. Therefore, we try to illustrate them with clear examples. These different approaches include clear descriptions of what these activities look like, why to develop and implement them, and how to do so for your specific needs.

The complete story of the universe and absolutely everything in it (minus the boring parts). Despite our clever linguistic abilities, humans are spectacularly ill-equipped to comprehend what's happening in the universe.

Our senses and intuition routinely mislead us. The

Complete Guide to Absolutely

Everything (Abridged) tells

the story of how we came to

suppress our monkey minds and

perceive the true nature of

reality. Written with wit and

humor, this brief book tells

the story of science—tales of

fumbles and missteps, errors

and egos, hard work,

accidents, and some really

bad decisions—all of which

have created the sum total of

human knowledge. Geneticist

Adam Rutherford and

mathematician Hannah Fry

guide readers through time

and space, through our bodies

and brains, showing how

emotions shape our view of

reality, how our minds tell

us lies, and why a mostly

bald and curious ape decided

to begin poking at the fabric

of the universe. Rutherford

and Fry shine as science

sleuths, wrestling with some

truly head-scratching

questions: Where did time

come from? Do we have free

will? Does my dog love me?

Hilarious sidebars present

memorable scientific

oddities: for example,

hypnotized snails, human-

sized ants, and the average

time it takes most animals to

evacuate their bladders. (A

surprisingly consistent

twenty-one seconds, if you

must know.) Both rigorous and

playful, The Complete Guide

of the weirdness of the

humans, and the joys and

follies of scientific
