Course 3, Pre-Algebra McGraw-Hill Education Precalculus is adaptable and designed to fit the needs of a variety of precalculus courses. It is a comprehensive text that covers more ground than a typical one- or two-semester college-level precalculus course. The content is organized by clearly-defined learning objectives, and includes worked examples that demonstrate problem-solving approaches in an accessible way. Coverage and Scope Precalculus contains twelve chapters, roughly divided into three

groups. Chapters 1-4 discuss various types of functions, providing a foundation for the remainder of the course.

Chapter 1: Functions  
 Chapter 2: Linear Functions  
 Chapter 3: Polynomial and Rational Functions  
 Chapter 4: Exponential and Logarithmic Functions

Chapters 5-8 focus on Trigonometry. In Precalculus, we approach trigonometry by first introducing angles and the unit circle, as opposed to the right triangle approach more commonly used in College Algebra and Trigonometry courses.

Chapter 5: Trigonometric Functions  
 Chapter 6: Periodic Functions  
 Chapter 7: Trigonometric Identities and Equations  
 Chapter 8: Further Applications of Trigonometry

Chapters 9-12 present some advanced Precalculus topics that build on topics introduced in chapters 1-8. Most Precalculus syllabi include some of the topics in these chapters, but few include all. Instructors can select material as needed from this group of chapters, since they are not cumulative.

Chapter 9: Systems of Equations and Inequalities  
 Chapter 10: Analytic Geometry  
 Chapter 11: Sequences, Probability and Counting Theory

Chapter 12: Introduction to Calculus
