This book describes exciting new opportunities for utilizing robust graph representations of data with common machine learning algorithms. Graphs can model additional information which is often not present in commonly used data representations, such as vectors. Through the use of graph distance ? a relatively new approach for determining graph similarity ? the authors show how well-known algorithms, such as k-means clustering and k-nearest neighbors classification, can be easily extended to work with graphs instead of vectors. This allows

for the utilization of additional information found in graph representations, while at the same time employing well-known, proven algorithms. To demonstrate and investigate these novel techniques, the authors have selected the domain of web content mining, which involves the clustering and classification of web documents based on their textual substance. Several methods of representing web document content by graphs are introduced; an interesting feature of these representations is that they allow for a polynomial time distance computation, something which is typically an NP-complete problem when using graphs. Experimental results are reported for both clustering and classification in three web document collections using a variety of graph representations, distance measures, and algorithm parameters. In addition, this book describes several other related topics, many of which provide excellent starting points for researchers and students interested in exploring this new area of machine learning further. These topics include creating graph-based multiple classifier ensembles through random node selection and visualization of graph-based data using multidimensional scaling.

Born in 1919, Robert W. (Bob) Day looks back on the ten decades of his lifetime with wonder and gratitude. While recognition and accolades for jobs well done followed him throughout his life, it was the adventures and the family, friends, and co-workers with whom he shared those adventures, that he remembers most. As a youngster, Bob never expected his life beyond Leavenworth, Kansas to be full of life threatening moments nor moments of serene beauty stretching over four continents, but it was. He never imagined warding off machine-gun-weilding revolutionaries, poisonous mambo snakes, nor a Prince intent on buying his daughter, but he did. He would have been surprised to know

that more than once he would face death in a failing airplane, and live to tell the tale. Bob recalls all this and more as he celebrates his 100 years of an adventurous life. Here, in his own words, is Bob's story as he remembers it in 2019.
