flow can occur with very viscous fluids such as lube oil and with very small flow velocities. Laminar flow can be explained as a microscopic viscous interaction between several layers of fluid. In laminar flow the fluid particles move in parallel paths or streamlines. A particle has only

axial velocity along a streamline.

110 Scope of the Fluid Flow Manual The Fluid Flow Manual presents the equations that model basic fluid flow phenomena. Most of the equations and discussions are oriented toward solving for pressure drop given well defined fluids, flow rates, and geometry in simple hydraulic systems. In general the manual treats isothermal flow.
