This new edition meets the requirements of the revised Core Curriculum for Surgical Technologists, 5th edition. It is written by surgical technologists for surgical technologists. The content focuses on the concepts and skill development (cognitive and procedural) required of surgical technologists in the operative environment. The text uses the A POSitive CARE approach to surgical problem solving that concentrates on the ability of the surgical technologist to predict the patient's needs and surgeon's needs through the intraoperative period. The goal is for the surgical technologist to apply this model in daily practice for maximum efficiency and effectiveness during the surgical procedure. The surgical procedures included in the text were selected for their instructive value and because the skills demonstrated can be applied to many other procedures.

Sender Garlin is a veteran journalist and pamphleteer who was present at all the Moscow purge trials of the 1930s. Here he writes on three Americans radicals involved in forging a new political force in the late-19th and early-20th centuries.

Experiment Station Record Westview Press
Originally published in 1951, this book discusses the life cycles of various parasitic animals, as distinct from parasitic bacteria and plants. Key biological points are illustrated with references to parasitic animals that attack either humans or domestic animals for the purposes of clarity, and the effect of the host-parasite relationship on both parties is also examined.

Three American Radicals Copyright Office, Library of Congress
Introduction to Laboratory Animal Science and Technology discusses the principles involved in the healthy maintenance of animals in the laboratory or animal house. This book is divided into eight six units of study of the physical requirements of animals, physiological data, and techniques of husbandry, followed by summary data capsules and recommended further reading. After an overview of the laboratory animals, this book goes on dealing with various aspects of animal care, including their accommodation, health care routine, and animal health and hygiene. The next chapters examine the components of animal diet, the biological aspects of animal reproduction, breeding and heredity. The final chapter emphasizes the legal requirements concerning anesthesia, laboratory procedures, and the issue of euthanasia. This book will prove useful to laboratory technicians, students, students, researchers, and the general public who are concerned for animals and their use in laboratory work.
