Mastering Assessment: A Self-Service System for Educators, 2/e (hereafter referred to as MA) is a set of 15

booklets intended to be the grist for a wide variety of professional development programs focused on educational assessment. Each of the MA booklets was deliberately written to permit a one- sitting or two- sittings reading by busy educators. The resultant brevity of the MA booklets, coupled with their being provided as separate documents, is intended to provide users of the MA system with considerable latitude in determining how best to use the booklets. A Facilitator's Guide is available to guide educators in using the 15 booklets in their professional development programs and can be downloaded at no additional charge from Pearson's Instructor Resource Center. Mastering Assessment boxset includes:

- Appropriate and Inappropriate Tests for Evaluating Schools
- Assessing Students' Affect
- Assessing Students with Disabilities
- Assessment Bias: How to Banish It
- Classroom Evidence of Successful Teaching
- College Entrance Examinations: The SAT and the ACT
- Constructed-Response Tests: Building and Bettering
- How Testing Can Help Teaching
- Interpreting the Results of Large-Scale Assessments
- Portfolio Assessment and Performance Testing
- Reliability: What Is It and Is It Necessary?
- Selected-Response Tests: Building and Bettering
- The Role of Rubrics in Testing and Teaching
- Test Preparation: Sensible or Sordid?
- Validity: Assessment's Cornerstone

Read the story that has inspired millions The

desert, I remember. The shrieking hyenas, I remember...I remember playing soccer with rocks, and a strange man telling me and my brother Tewolde that we had to go on a trip and Tewolde refusing to go. The man took out a piece of gum and Tewolde happily traded it for his homeland.... So begins the remarkable true story of a young boy's journey from civil war in east Africa to a refugee camp in Sudan, to a childhood on welfare in an affluent American suburb, and eventually to a full-tuition scholarship at Harvard University. Following his father's advice to "treat all people—even the most unsightly beetles—as though they were angels sent from heaven," Mawi overcomes the challenges of language barriers, cultural differences, racial prejudice, and financial disadvantage to build a fulfilling, successful life for himself in his new home. *Of Beetles and Angels* is at once a harrowing survival story and a compelling examination of the refugee experience. With hundreds of thousands of copies sold since its initial publication, the unforgettable memoir continues to touch and inspire readers. This special fifteenth anniversary edition features bonus materials, including a new introduction and afterword by the author. *please note the updated anniversary edition will be released in June. Orders placed before that edition is available will receive the current paperback*

There are a number of marvelous books that address the topic of the case method. If you are interested in facilitating cases, you can look to the classic book *Teaching and the Case Method* by Louis Barnes, C. Roland Christensen and Abby Hansen (1994). The collection of essays on the subject, *Education for Judgment: The Artistry of Discussion Leadership* by C. Roland Christensen, David Garvin and Ann Sweet (1991) is a wonderful and inspiring read as well. If your interest is case-based research, it would be nearly impossible to find a more authoritative source than Robert Yin's (2009,

4th Edition) *Case Study Research: Design and Methods*, which (at last count) has been cited nearly 29,000 times, according to Google Scholar. There is even a new entry to the field, William Ellet's (2007) *The Case Study Handbook: How to Read, Discuss, and Write Persuasively about Cases* that is specifically aimed at the student. At first glance, then, the topic of case studies in education and research seems to be pretty well covered. Do we really need another book on the subject? I write this book believing the answer is yes. While I have great affection for the classics, there are a number of issues facing most business faculty—not to mention faculty members from disciplines outside of business—that these books simply do not address. In writing this book, my intention is to offer some thoughts on some of these. Paradoxically, these omissions arise from the very fact that the authors of the classics are undisputed masters of their craft. Why this is a problem should become clear as I identify the three areas of focus for this book. The first issue that I feel must be considered is using the case method with a novice audience. Consider the following. When I was enrolled in the MBA program at Harvard Business School (HBS) in the early 1980s, the curriculum consisted of nearly 900 case discussion (15 per week) and—perhaps—as many as 20 class periods given over to lecture-style presentations. When I teach a case-method graduate course at my own institution, on the other hand, I am constrained to 11 case discussions (a 12 week semester). As it happens, I am also the only course in the entire program that employs pedagogy reasonably faithful to the case method, as it is normally defined. The math is very simple. By the last day of my semester, my students have as much experience discussing cases as I did on Thursday afternoon of the first week of my two year MBA program at HBS. With the exception of faculty teaching at those rare

institutions that have chosen to widely adopt the case method, the situation I face is commonplace. The second concern that existing books raise for me is their tendency to focus on isolated topics. Specifically, case facilitation, case writing and case research are treated as separable activities. I would argue that these three aspects of the case method—which I define quite broadly—are inseparable. For institutions that wish to achieve the full set of benefits provided by the case method, all three activities must be pursued in parallel. Perhaps this is why so few institutions have achieved success through the case method. In this book, I will argue that achieving such integration is precisely why those rare institutions have been so successful. Once you start believing that the case method can be a key to institutional success, how you get there becomes a real challenge. At leading institutions featuring the case method, such as HBS, the philosophy is largely learned through a period of apprenticeship. For example, I did not encounter any of the references mentioned in the first paragraph—excepting Yin—at any time during my 5 year doctorate at HBS. Instead, I went out and wrote cases, facilitated discussions and did research under the guidance of faculty members who were masters of the craft. How can someone without the benefit of such an experience acquire such mastery? While I cannot offer any promises in this regard, I will at least provide some examples and easy-to-follow checklists that may be of service to individuals getting started.

Cracking the AP Psychology Exam, 2014 Edition
Penguin UK

Designed as a textbook for undergraduate students in various engineering disciplines—Mechanical, Civil, Industrial Engineering, Electronics Engineer-ing and Computer Science—and for postgraduate students in Industrial Engineering and Water Resource Management, this comprehensive and well-organized book, now in its Second Edition, shows how complex economic decisions can be made from a number of given alternatives. It provides the managers not only a sound basis but also a clear-cut approach to making decisions. These decisions will ultimately result in minimizing costs and/or maximizing benefits. What is more, the book adequately illustrates the concepts with numerical problems and Indian cases. While retaining all the chapters of the previous edition, the book adds a number of topics to make it more comprehensive and more student friendly.

What's New to This Edition

- Discusses different types of costs such as average cost, recurring cost, and life cycle cost.
- Deals with different types of cost estimating models, index numbers and capital allowance.
- Covers the basics of nondeterministic decision making.
- Describes the meaning of cash flows with probability distributions and decision making, and selection of alternatives using simulation.
- Discusses the basic concepts of Accounting. This book, which is profusely illustrated with worked-out examples and a number of diagrams and tables, should prove extremely useful not only as a text but also as a reference for those offering courses in such areas as Project Management, Production Management, and Financial Management.

Abraham Lincoln's Second Inaugural Address
Holt McDougal

Narrated in the first person, this short story is one episode in the life of a Russian labour-camp inmate. Written by Varlam Shalamov after his own experiences at a gulag, it describes the apathy of prisoners as they steadily approach death, the assuredness of betrayal and duplicity, and the constant craving for material satisfaction to lessen the empty, scorched feeling inside. When an old acquaintance lays out an escape plan, that satisfaction is offered in the form of condensed milk: a sweet, delicious extravagance - a small element of joy in the midst of impending death.

Johannes Kepler is a fascinating man who would revolutionize humanity's conception of the cosmos and their place within it. He would replace the Ptolemaic system with his three laws that described the orbital motion of the planets around the Sun. This scientist's work continues to inform and facilitate modern advances in technology, astronomy, and astrophysics. In addition to being an enthralling life and times account of a great thinker, this biography also supports Common Core standards for the reading of biographies, historical and scientific accounts, the analyzing of the relationship between primary and secondary sources, and citing evidence to support that analysis.
