This book proposes new perspectives on relational wellness and the contemporary family—combining a psychoanalytic overview with scientific research about the burgeoning popularity of divorce, the increase in “ stepfamilies, ” and the use of social networks as well as other technologies. In this day and age, psychoanalysis has become increasingly interested in hyper-modern scenarios; for example, social networks and apps provide matching

algorithms, which allow users to connect with people of similar interests. These networks have become one of the places where dissatisfied partners seek “ more satisfactory situations. ” In the United Kingdom, cohabitation lasts for up to two years, on average, and 40% of marriages end in divorce. In the United States, the percentage rises: it has now reached 50%. Today the value of temporariness, in which everything is fragmented, is exalted. On the other hand, is it wrong to deny the natural ebb and flow of human feeling?

decades. Stroke, cancer, and heart disease together account for the vast majority of deaths in the United States. In addition, due to improved medical care, many Americans who would previously have died now survive these disorders, necessitating that they receive appropriate rehabilitation efforts. One result of our own medical advances is that we must now accept the high costs associated with providing quality care to individuals who develop one of these problems, and we must avail ourselves to assist of afflicted individuals. families Despite the relative stability of causes of death and disability, the health-care field is currently experiencing tremendous pressures, both from professionals with in the field, who desire more and better technology than is currently available, and from the public and other payers of health care (e.g., insurance companies), who seek an end to increasing health-care costs.
