This book is the first work that comprehensively presents the accounts of Lia Eden, a former flower arranger who claims to have received divine messages from the Archangel Gabriel and founded the divine Eden Kingdom in her house in Jakarta. This book places Lia Eden's prophetic trajectory in the context of diverse Indonesian spiritual and religious traditions, by which hundreds of others also claimed to have been commanded by God to lead people and to establish religious groups. This book offers a fresh approach towards the rich Indonesian religious and spiritual traditions with particular attention to the accounts of the emergence of indigenous prophets who founded some popular religions. It presents the history of prophetic tradition which remains alive in Indonesian society from the colonial to reform period. It also explores the ways in which these prophets rebelled against two hegemonies: colonial power in the past and Islamic orthodoxy in the present. The discussion of this book focuses on Lia Eden including her biography, claims to prophethood and divinity, the development of her group Eden Kingdom, her challenge to Islamic orthodoxy under the banner of the MUI (Indonesian Ulama Council), her persecution by radical groups, her experiences in court trials and imprisonment, and public responses to her emergence. The discussion also covers other themes currently drawing public attention in Indonesia, such as pluralism, religious freedom, tolerance, discrimination against minorities, and secularisation.

In all parts of Asia, households devote considerable expenditures to private supplementary tutoring. This tutoring may contribute to students' achievement, but it also maintains and exacerbates social inequalities, diverts resources from other uses, and can contribute to inefficiencies in education systems. Such tutoring is widely called shadow education, because it mimics school systems. As the curriculum in the school system changes, so does the shadow. This study documents the scale and nature of shadow education in different parts of the region. Shadow education has been a major phenomenon in East Asia and it has far-reaching economic and social implications.

Rising young comedian Moshe Kasher is lucky to be alive. He started using drugs when he was just 12. At that point, he had already been in psychoanalysis for 8 years. By the time he was 15, he had been in and out of several mental institutions, drifting from therapy to rehab to arrest to...you get the picture. But KASHER IN THE RYE is not an "eye opener" to the horrors of addiction. It's a hilarious memoir about the absurdity of it all. When he was a young boy, Kasher's mother took him on a vacation to the West Coast. Well it was more like an abduction. Only not officially. She stole them away from their father and they moved to Oakland, California. That's where the real fun begins, in the war zone of Oakland Public Schools. He was more than just out of control-his mother walked him around on a leash, which he chewed through and ran away. Those early years read like part Augusten Burroughs, part David Sedaris, with a touch of Jim Carrol...but a lot more Jewish. In fact, Kasher later spends time in a Brooklyn Hasidic community. Then came addiction... Brutally honest and laugh-out-loud funny, Kasher's first literary endeavor finds humor in even

the most horrifying situations.

[Cambridge Checkpoint Science Workbook 9](#) Deakin University Press A team of examiners from the Organisation for Economic Cooperation and Development (OECD) reviews Portugal's education system in a three-part report. Part One begins with the consequences of the 1974 revolution, Portugal's economic problems, its impending attachment to the European Economic Community, and rising public expectations about education. It continues with criticism of the Ministry of Education, which is overstuffed and has duplicate functions. The examiners propose reduction of branches and suggest the establishment of a national education advisory council and closer relations with other government agencies. A high priority for the compulsory school-level education (four primary and two preparatory grades) is improvement of standards in rural areas. Accepting the future extension of compulsory schooling from 6 to 9 years, the examiners counsel step-by-step reform of the school structure and curriculum. Education of 16-to-19 year olds is a problematic issue since upper-secondary schools are not providing adequate vocational courses. The examiners feel a solution is for Portugal to adopt a comprehensive education and training policy for that age group implemented jointly by the Ministries of Education and Labor. Part Two of the report includes a record of the review meeting between the OECD examiners and the Minister of Education and his delegates and addresses five areas of concern. The third part is a summary of the Ministry of Education's Background Report of the education system in Portugal. (MD)

This interdisciplinary book offers a critical analysis of Thai education and its evolution, providing diverse perspectives and theoretical frameworks. In the past five decades Thailand has seen impressive economic success and it is now a middle-income country that provides development assistance to poorer countries. However, educational and social development have lagged considerably behind its globally recognized economic success. This comprehensive book covers each level of education, such as higher and vocational/technical education, and such topics as internationalization, inequalities and disparities, alternative education, non-formal and informal education, multilingual education, educational policy and planning, and educational assessment. The 25 Thai and 8 international contributors to the volume include well-known academics and practitioners. Thai education involves numerous paradoxes, which are identified and explained. While Thailand has impressively expanded its educational system quantitatively with much massification, quality problems persist at all levels. As such, the final policy-oriented summary chapter suggests strategies to enable Thailand to escape "the middle income trap" and enhance the quality of its education to ensure its long-term developmental success.

More than any other textbook on the market, Play and Child Development, Fourth Edition, ties play directly to child development. The

authors address the full spectrum of play-related topics and seamlessly blend research, theory, and practical applications throughout this developmentally-based resource. Readers will learn about historical, theoretical, and practical approaches to promoting development through integrated play and learning approaches across various age or developmental levels. The book analyzes play theories and play therapy; presents a history of play; and discusses current play trends. It explores ways to create safe play environments for all children, and how to weave play into school curricula. Finally, the authors examine the role of adults in leading and encouraging children's natural tendencies toward learning by playing. Special coverage includes a full chapter on play and children with disabilities, and the value of field trips in supporting learning. This edition offers expanded and/or updated coverage on evidence based play theory, child development, play environments, and early play-based curricula for children of all abilities in various learning contexts. All content in the text is purposefully arranged to guide its readers through key and core topics leading to a comprehensive understanding of play intended to help prepare pre-service teachers to lead and support children's play in a number of contexts: preschools, elementary schools, park systems, and research programs.

This volume examines contemporary Thailand. It captures aspects of Thai society that have changed dramatically over the past years and that have turned Thailand into a society that is different from what most people outside the country know and expect. The social transition of Thailand has been marked by economic growth, population restructuring, social and cultural development, political movements, and many reforms including the national health care system. The book covers the social, cultural, and economic changes as well as political situations. It discusses both historical contexts and emerging issues. It includes chapters on social and public health concerns, and on ethnicity, gender, sexuality and social class. Most chapters use information from empirical-based and historical research. They describe real life experiences of the contributors and Thai people who participated in the research.

based intervention program for at-risk students. The ultimate goal of the program is to provide rigorous, standards-based intervention instruction in a way that returns students to basic grade-level program materials as soon as possible. Science Focus One The American Evaluation Association (AEA) board of directors formed a task force to create the AEA Guiding Principles for Evaluators in November 1992. The task force developed a set of guiding principles for evaluators and then saw those principles through the many steps that eventually resulted in their adoption by vote of the membership of AEA. The present volume documents and critiques those principles. It first records the history of task force efforts, with special attention to the most important conceptual issues that arose. Then, after presenting the principles themselves, the authors discuss and critique both the strengths and weaknesses of the Guiding Principles for Evaluators. These chapters fall into two

categories: discussions at a very general level about the role of such principles in our profession, and problems that will arise in applying the principles in practice. The volume ends with a look to the future, to the sorts of issues and activities that we should keep in mind for the continued use and development of these principles.

This book presents a set of contributions to the current flow of psycholinguistic research, with new and challenging data gathered from Spanish that may illuminate issues about the generality of language processing models. Although it is possible to find a considerable amount of papers on psycholinguistic research with the Spanish language published in English-speaking journals, unfortunately, the scientific community does not have access to an overview of psycholinguistics in Spain. This book overcomes these limitations because it brings together state-of-the-art descriptions of the research and theory of the different subareas of psycholinguistics currently being studied in Spain. Spanish, the third most widely-used language in the world, differs from English in a number of important respects. Since English has been predominant in psycholinguistic research, contrasting properties of Spanish may help to test the generality of language processing mechanisms and to refine their description. The set of contrasting features considered in this book includes acoustical and syllabic transparency, shallow orthography, a much richer morphology, flexibility in word order, less variability in intonational contours, and the existence of null pronominal subjects for inflected verbs. There are also interesting contrasts in the frequency of different linguistic units, whose impact on language processing is also evaluated. One of the main lines of argument throughout this book deals with the tension between universality and variation as a way of characterizing the functioning of language capacities and processes. The variety of topics covered by this book ranges from one end of the spectrum of language related behavior to the other: speech perception, lexical access in word recognition, relations between phonological and orthographic representations, sentence processing, discourse comprehension, and language production. All chapters focus on questions of general interest within each topic, and in most cases they appeal to one particular feature of the Spanish language that is relevant for a given question. Most chapters show the indisputable importance of crosslinguistic research in psycholinguistics to improve understanding on whether universal cognitive mechanisms and language specific routines underlie the ability of understanding and producing language.
