This book is not intended to be a deep-dive on security, programming, reporting, configuration, etc. but more of a high-level overview on salesforce.com, Force.com development, tools, methodology and other resources. We will not cover all aspects of salesforce.com. We wrote this book to (hopefully) become an invaluable resource for anyone new or inexperienced with the Force.com platform. For new administrators and developers coming on to the platform, we see a gaping hole in existing reference books. This book is not intended for end users or advanced developers. This book is for people somewhere in the middle; let's say a business analyst or a new Java or .NET developer. We would like this to be the first book you pick up after your boss walks in and says, "Let's take a look at salesforce.com and see if we can build some applications in the cloud."This book contains the information that we wish we had when we started developing applications on Force.com.

To become an effective Customer Centered Company, everyone in your extended organization must work together in the interests of the customer. They can only do this effectively if they are working off a common set of data and information, and are communicating and collaborating through a common medium. They must ensure that the entire organization and its partners can be effectively harnessed in unison to ensure the customer is provided with a smooth, customized and efficient experience. This requires an element of structure and control to ensure everyone knows what they need to do and when they need to do it, and to be able to efficiently respond when things go off track. This book describes the challenges confronting organizations on the road to becoming a Customer Centered Company, and how they can be met by building smart process applications on top of the Force.com platform. Smart process applications (SPA) are a new category of software that address people-intensive, highly variable, loosely structured business activities by leveraging the new technology provided by social, mobile and cloud. SPA brings order, tracking and management to unstructured, interdependent and extended processes that are currently executed primarily via email, spreadsheets and meetings. The book also describes the role of IT in implementing and supporting SPA, and how SPA accelerates the implementation of Force.com across the enitire extended enterprise, resulting in enormous gains in productiivity, effectiveness and cost reduction. Learn how to build logic into your apps by configuring Salesforce.com Lightning Process Builder and Visual Workflow software tools to meet the needs of your organization without the use of code. You will be able to build workflow diagrams on the Salesforce.com platform and perform complex logic. Individuals who have created workflow diagrams in other applications (e.g., Microsoft Visio) will feel very comfortable using these two tools from Salesforce. If you find yourself in a situation where a standard Salesforce configuration does not meet your needs, you can always rely on a developer to extend the functionality through Visualforce and Apex code. What if you could take back that control and not rely on a developer or consultant? With two new technologies—Process Builder and Visual Workflow—introduced onto the Salesforce.com platform, you can accomplish much of what was normally handled with Apex code. Lightning Process Builder and Visual workflow both allow for advanced logic that standard configuration such as Salesforce.com Workflow cannot do. Salesforce.com Lightning Process Builder and Visual Workflow details how these technologies can be used to: Create a call center application that guides operators through a call with screens that change based on the caller's responses. Automatically submit approvals to speed up and streamline your business. Update related records for any object being modified, including standard and custom objects.
